

## Daily 15 Momentum Breakout

With Daily trend direction

Order flow

MMXM

### LTF Analysis

Check LTF MMXM

Price in PREMIUM/DISCOUNT

Order Flow

Classic BUY/SELL sweep in LOKZ into PDA's ( 1hr/4hr FVG/IFVG; OB; ) with 15min MSS with Bullish/Bearish imbalance on one of the Time Frames ( 15min/10min/5min ) BPR is extra plus, SMT present is a big plus

In classic BUY/SELL day price usually close or under/above Daily open, NY open

DISCRETION -

If Price is very close to the Main Target and everything else lines up - OK to enter in Premium if these 3 things are present:

: - Liquidity sweep into PDA

- Isolation strong Low/High is clear

- 15min MSS with a clear momentum ( check 5min/2min) BPR / IFVG is present in the sweep )

### Optimal Entry Point

E1 on 15MIN MSS CANDLE CLOSE

### Optimal Stop Placement

Above/Below the low of 15min MSS

If price is close to the main HTF Target - can put SL under/above 5min/2min

BPR after liquidity sweep to get enough RR

## **Optimal Max Target**

High low of the MMXM or

PWL/PWH

PSL/PSH

PDL/PDH

## **Risk Removal Plan**

Remove the Risk - SL to BE (Entry ) when price breaks the new 15min High/Low or over 1% in profit

! If The Low/high is very close structurally and trading with the main direction - Consider only taking some risk off or leaving the SL alone not to get stopped out on second retest. Let the trade breathe

## **Partial Profit Plan**

If RR 2/1 - SL to BE at previous High/Low when broke or 1% profit - let the rest run

If RR more the 2/1 - BE at previous High/Low when broke or 1% profit - then SL trailing on 15min swing low/high or 1hr swing low/high

## **Optimal Management for Strategy**

As above
