LESSON - 20

Market Maker Buy Model & Market Maker Sell Model

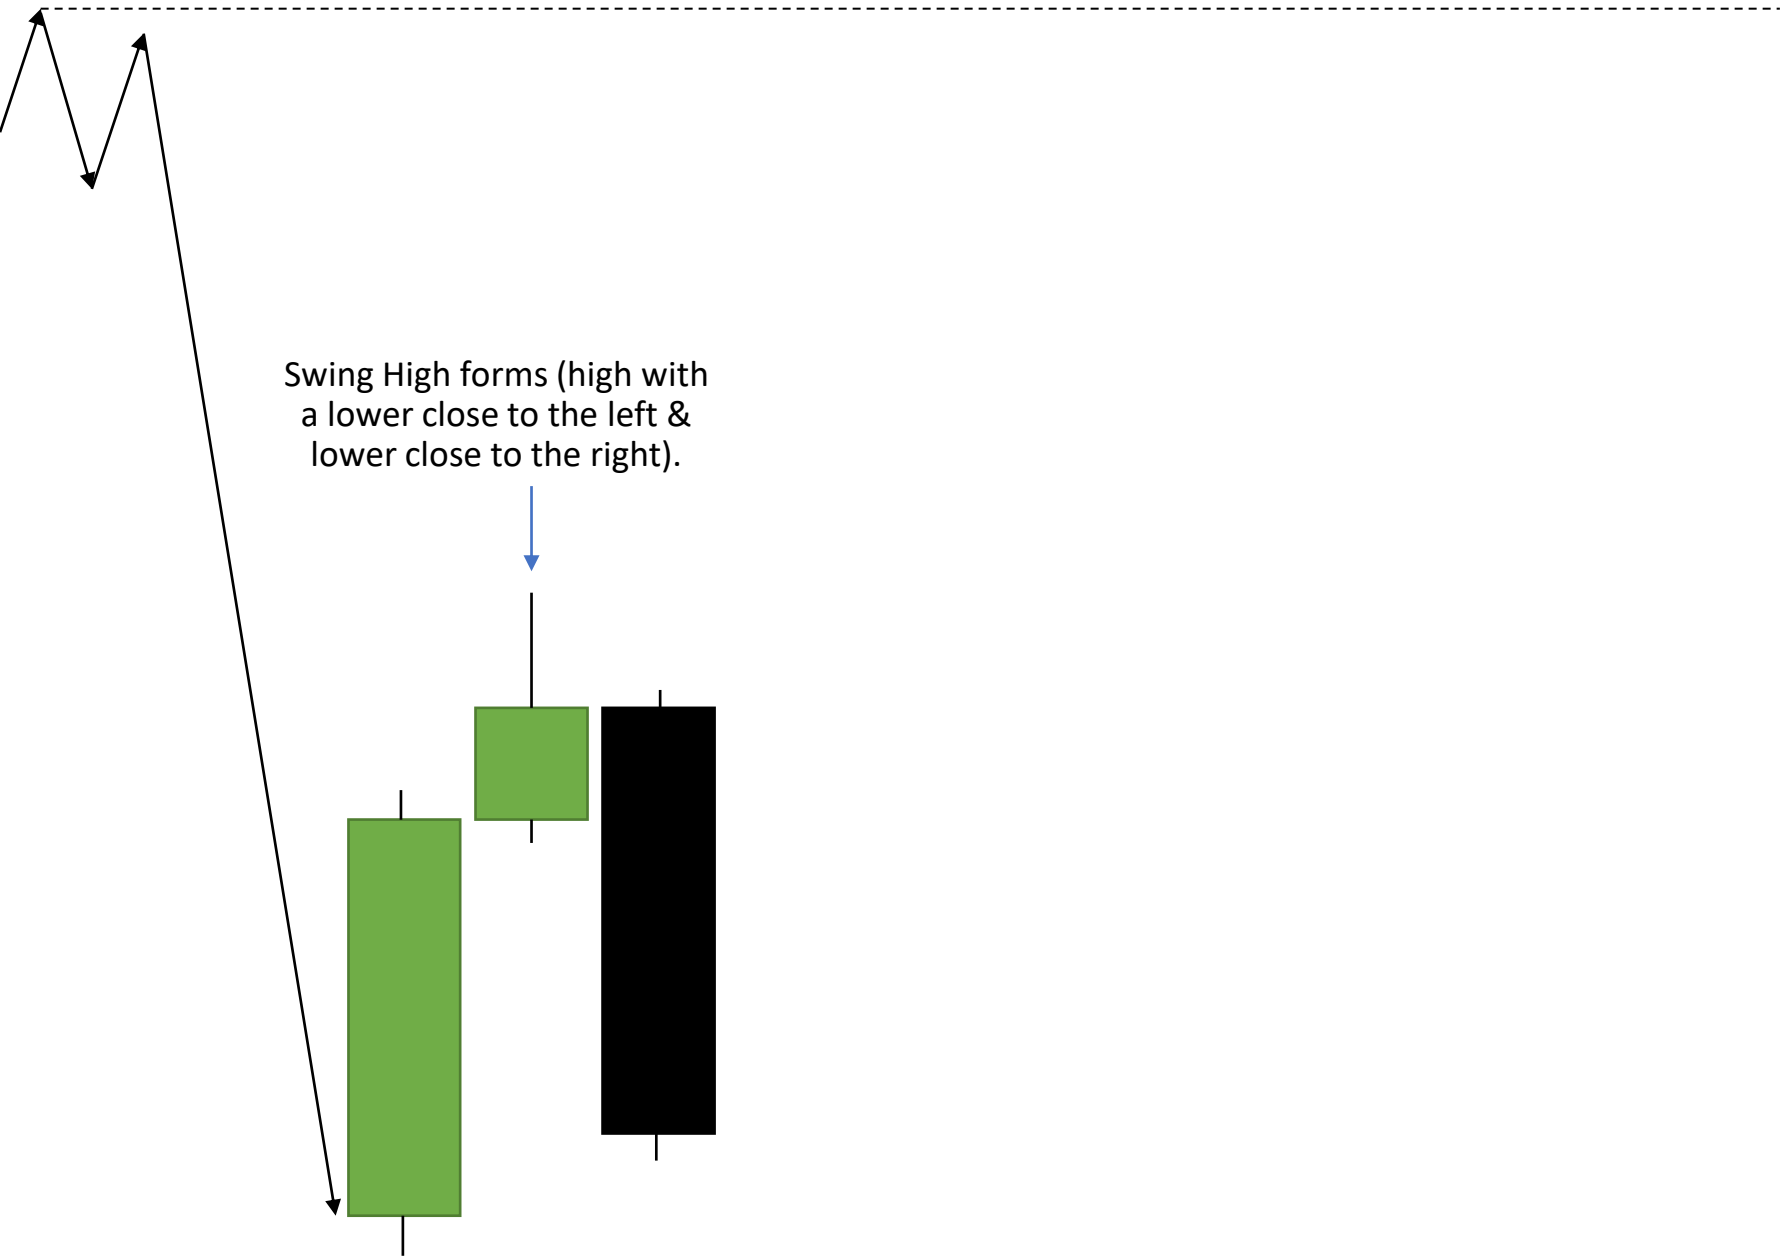

Something that will unlock new fields of clarity.

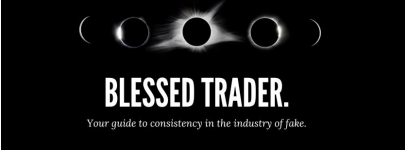

Let's start with a basic top down structure.

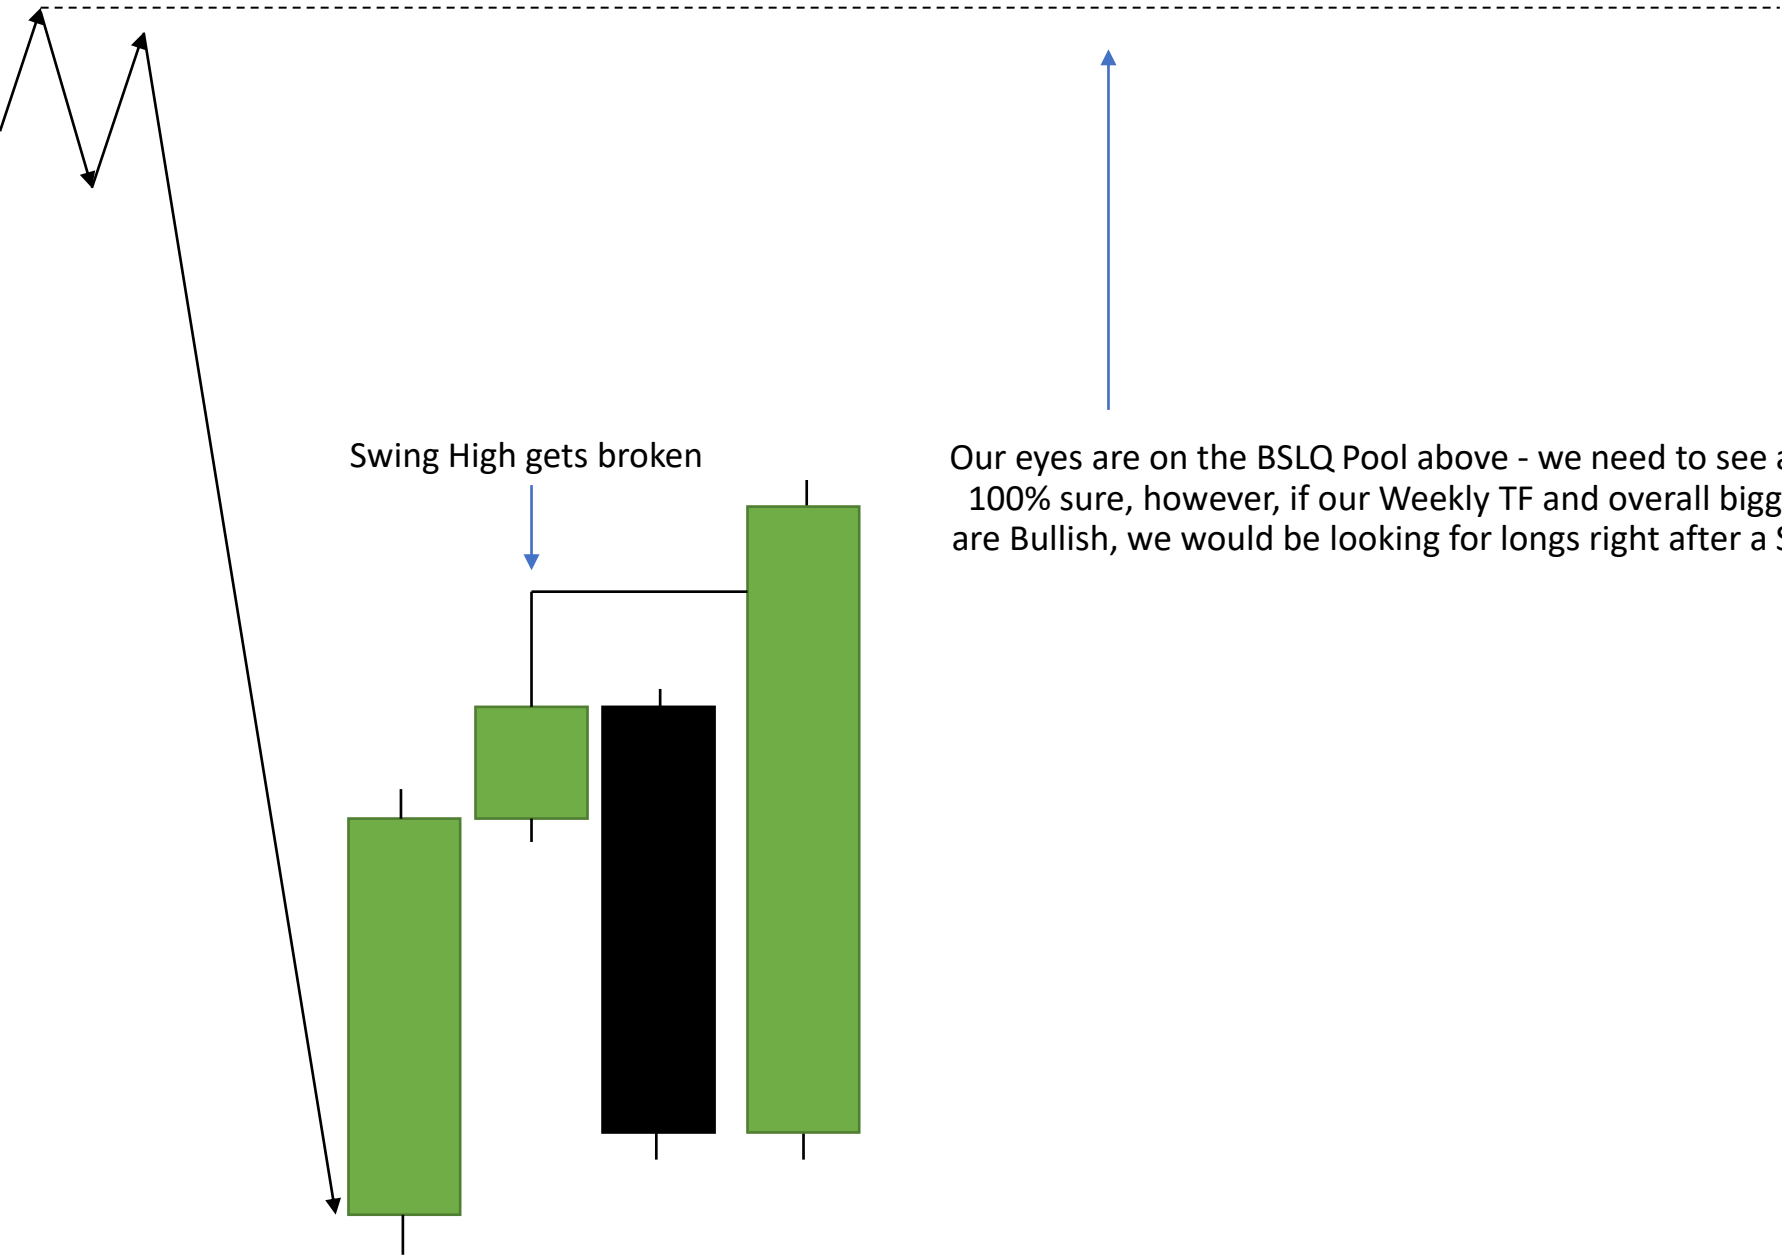

Buyside Liquidity Pool

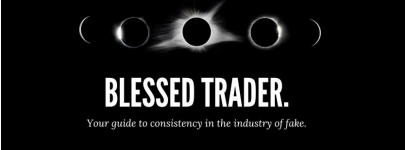

Buyside Liquidity Pool

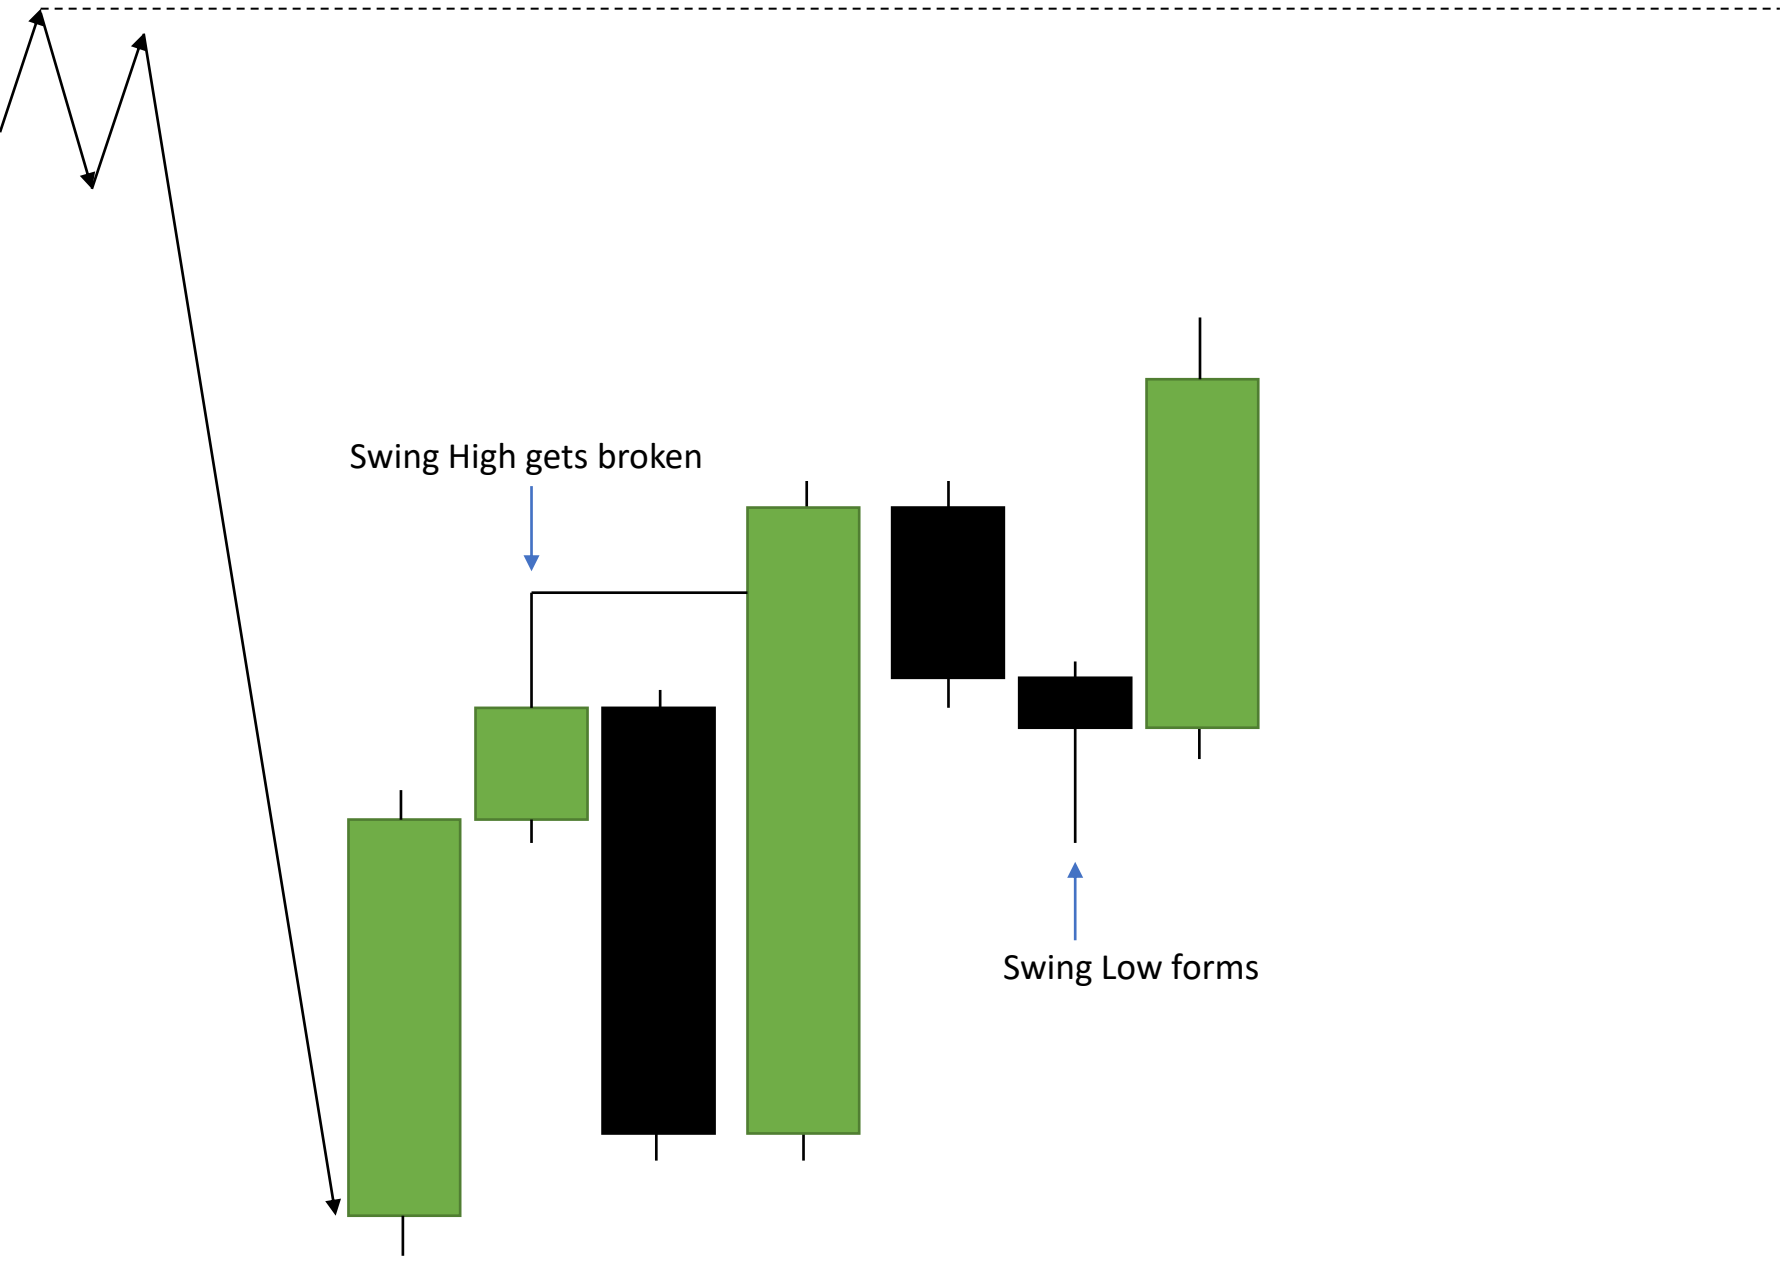

Swing High gets broken

Our eyes are on the BSLQ Pool above - we need to see a Swing Low to be 100% sure, however, if our Weekly TF and overall bigger structure bias are Bullish, we would be looking for longs right after a Swing High break.

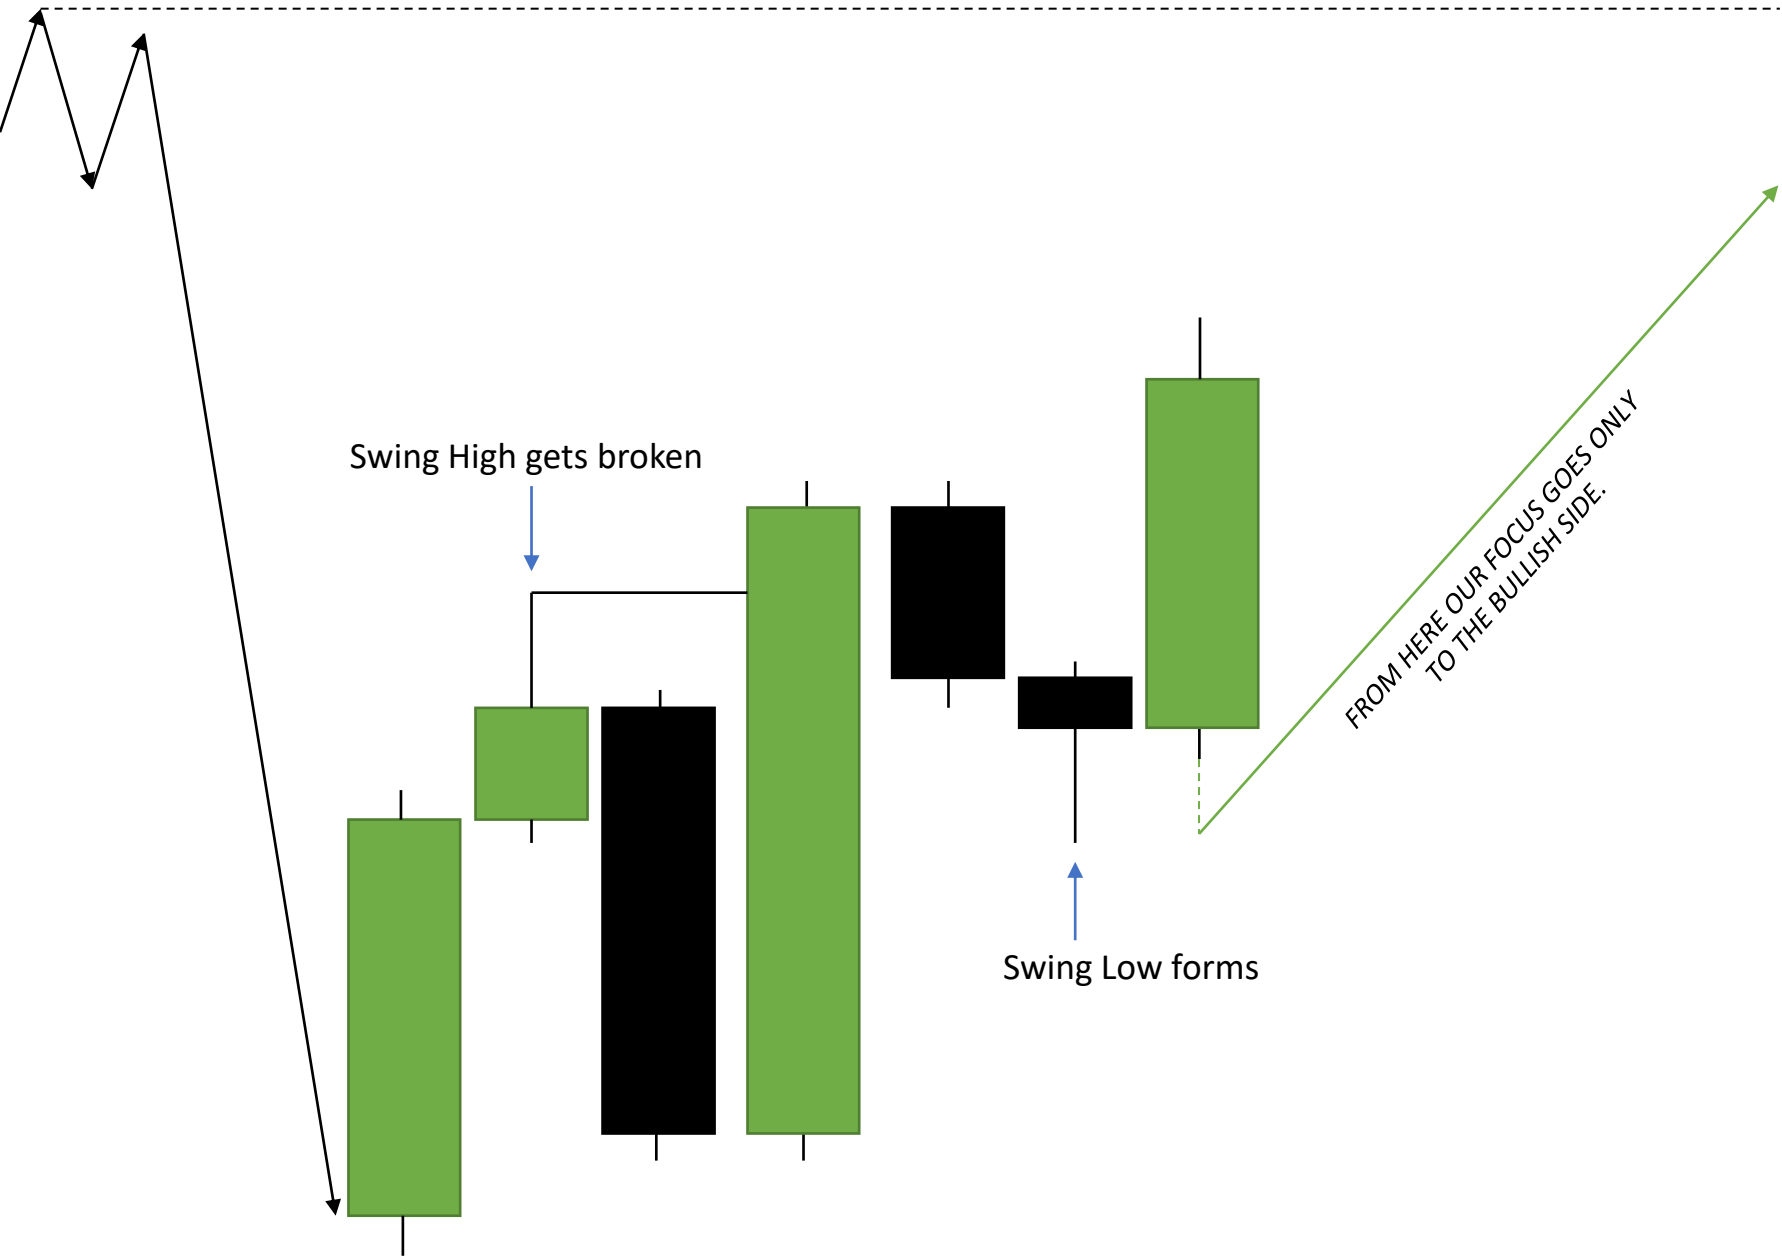

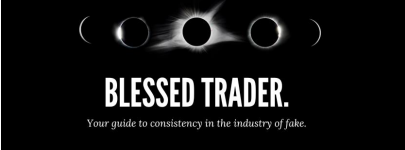

Buyside Liquidity Pool

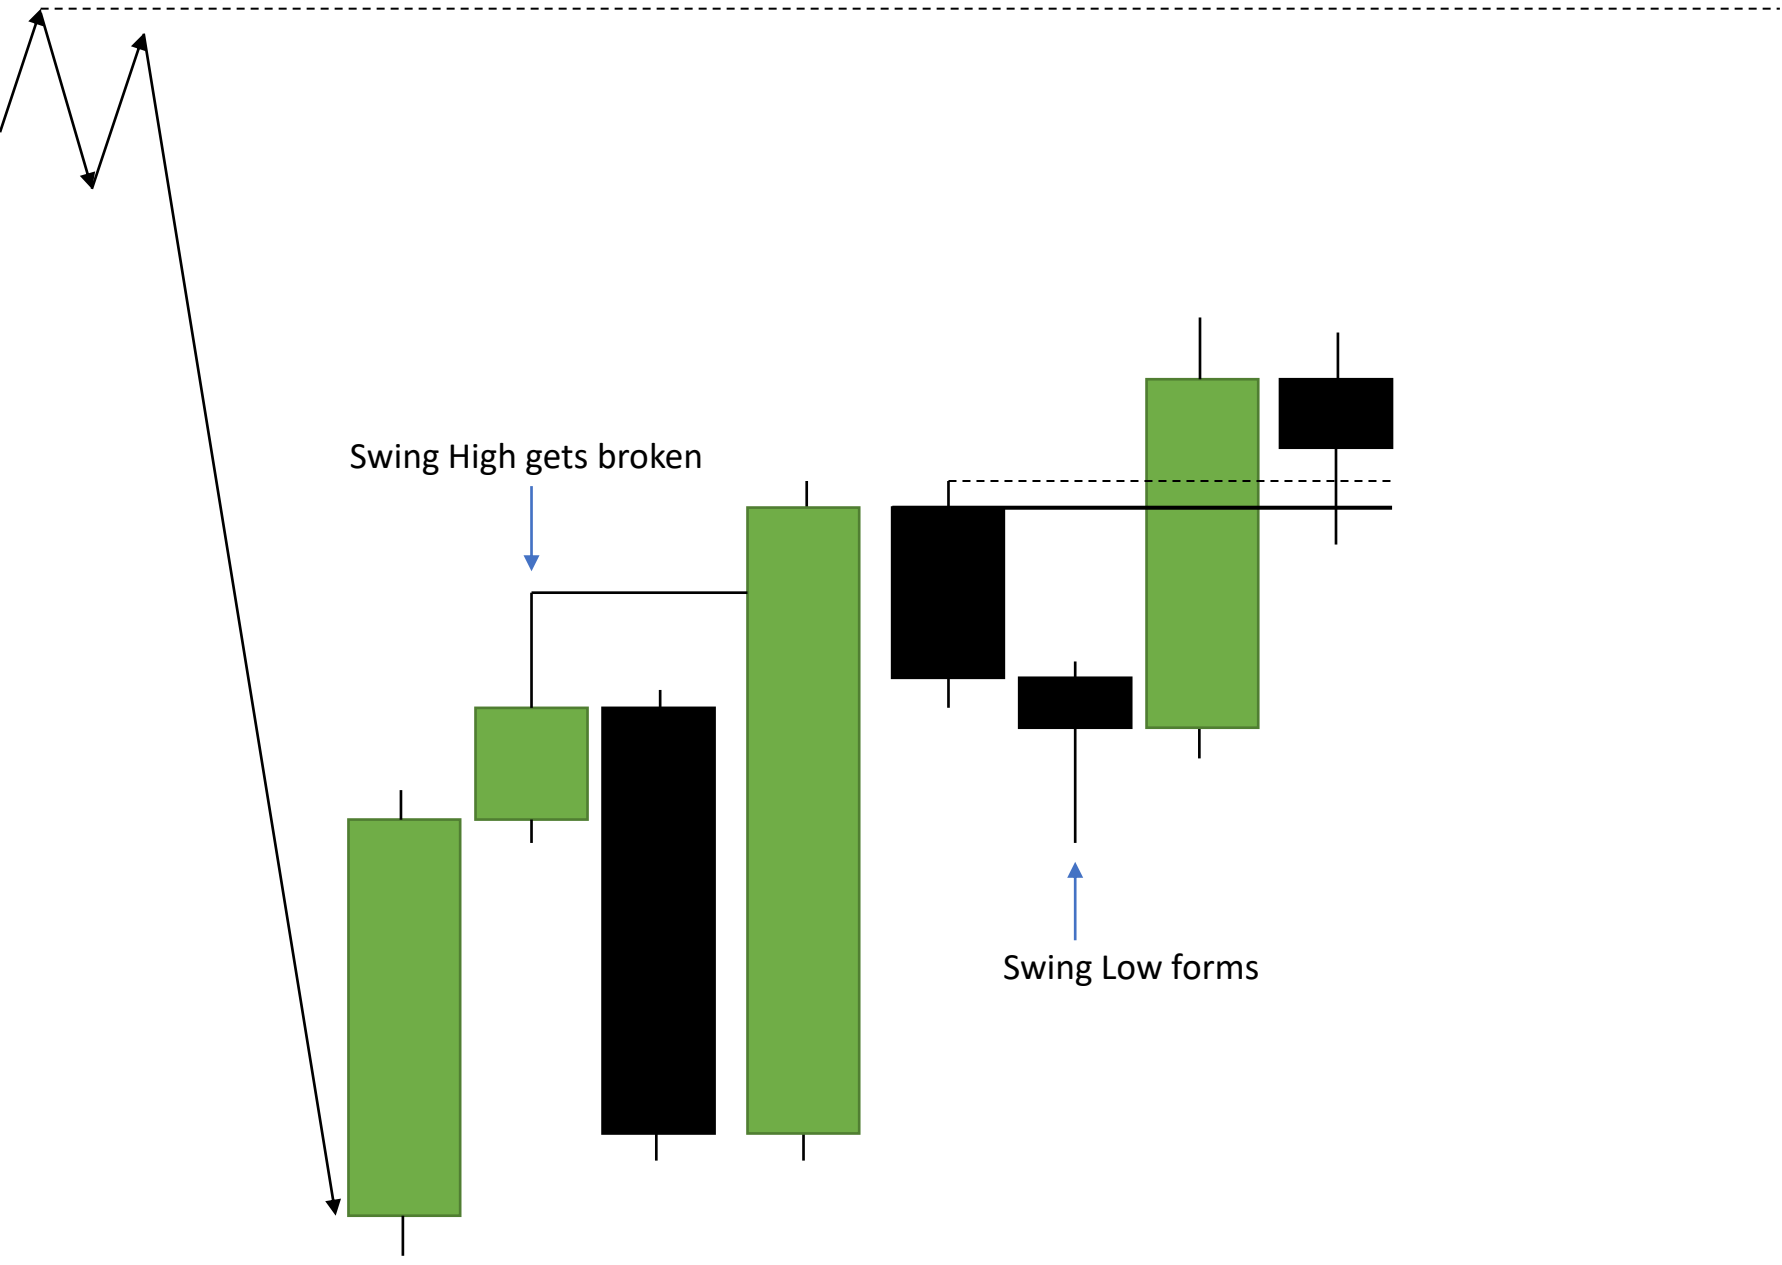

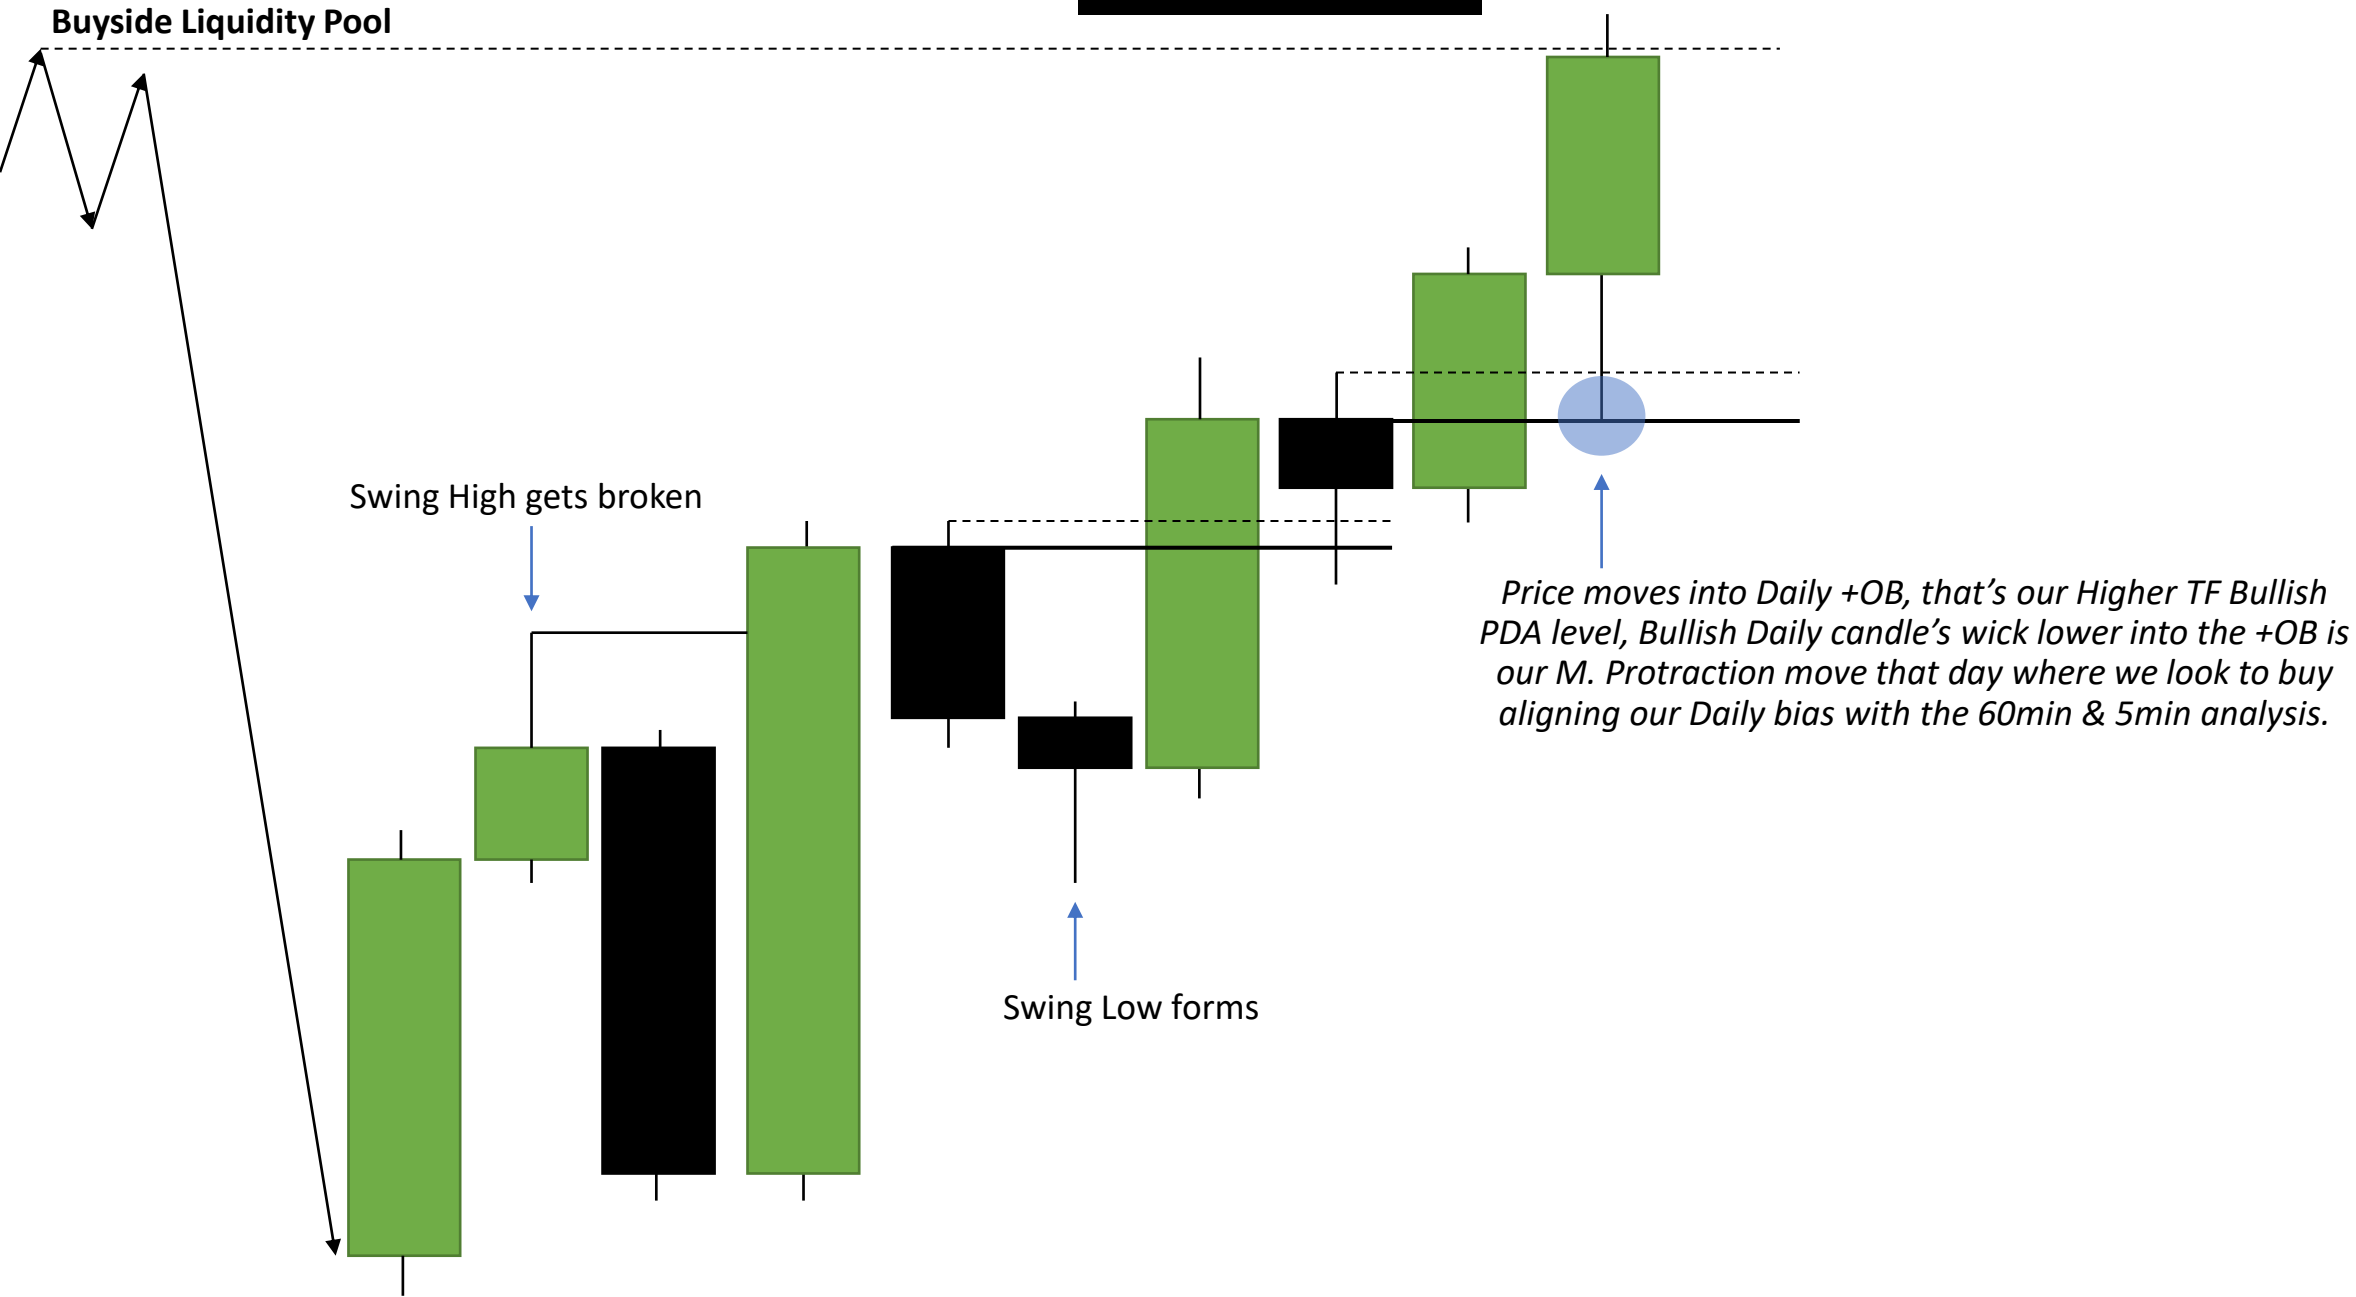

Buy-side Liquidity Pool

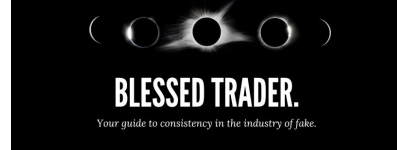

Buyside Liquidity Pool

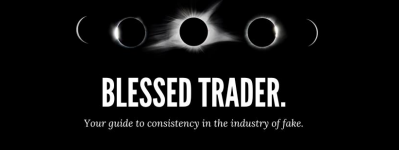

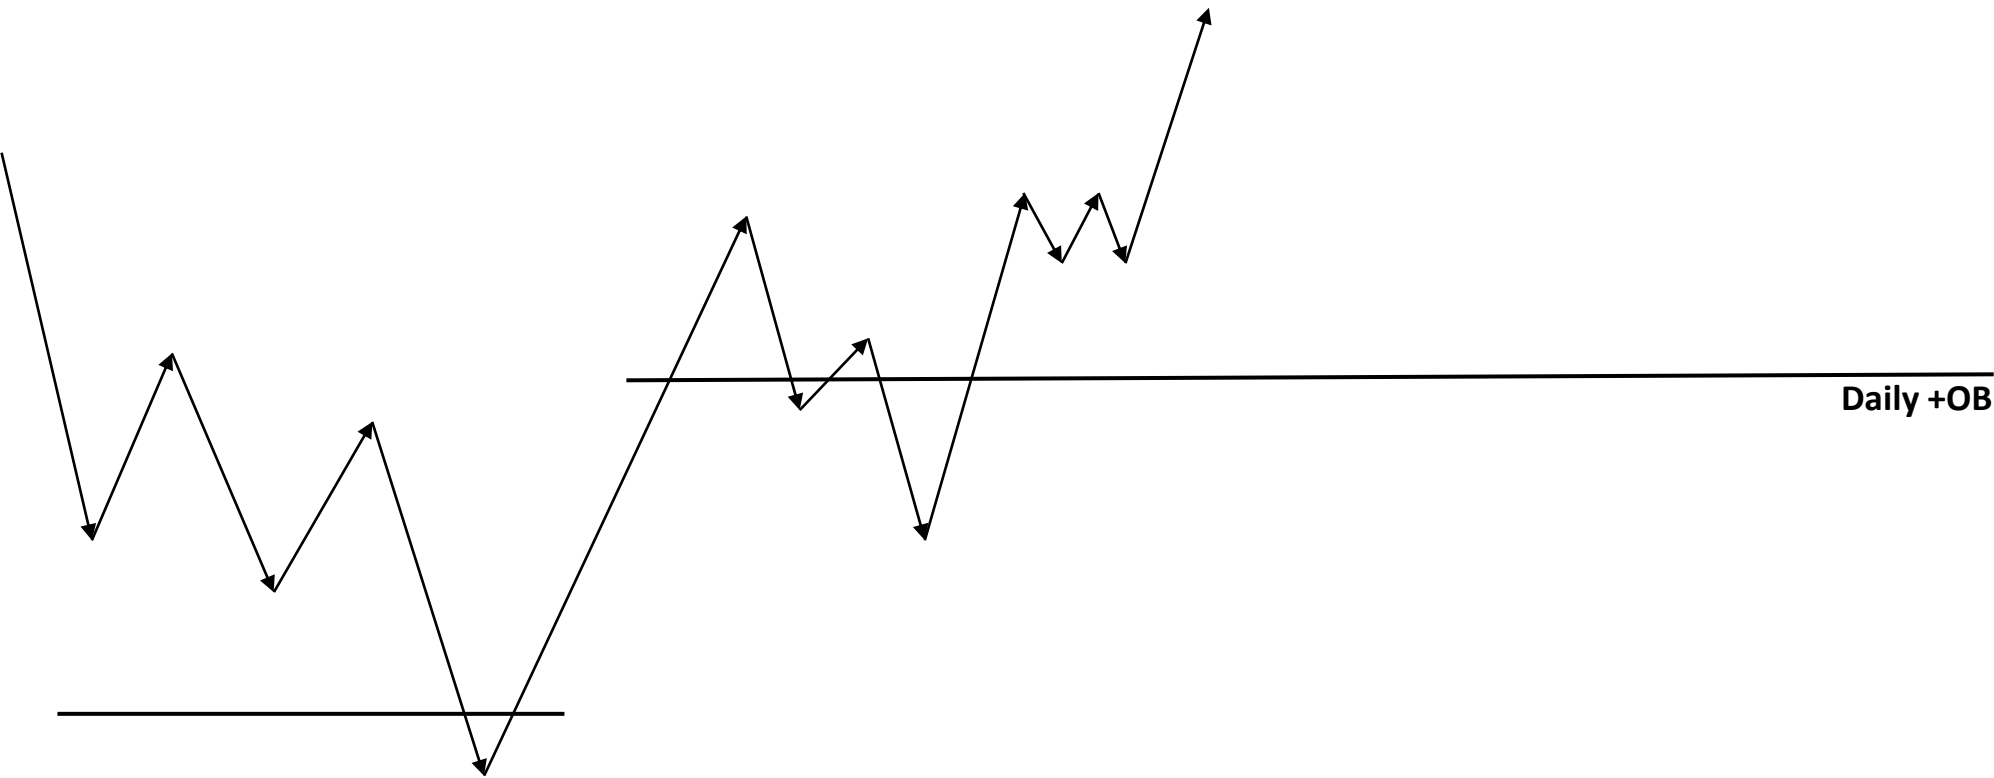

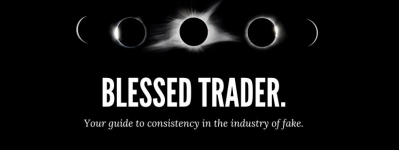

Now let's zoom into the 60min TF of the blue circle in the previous slide where price traded into the Bullish Daily +OB.

60min TIME-FRAME

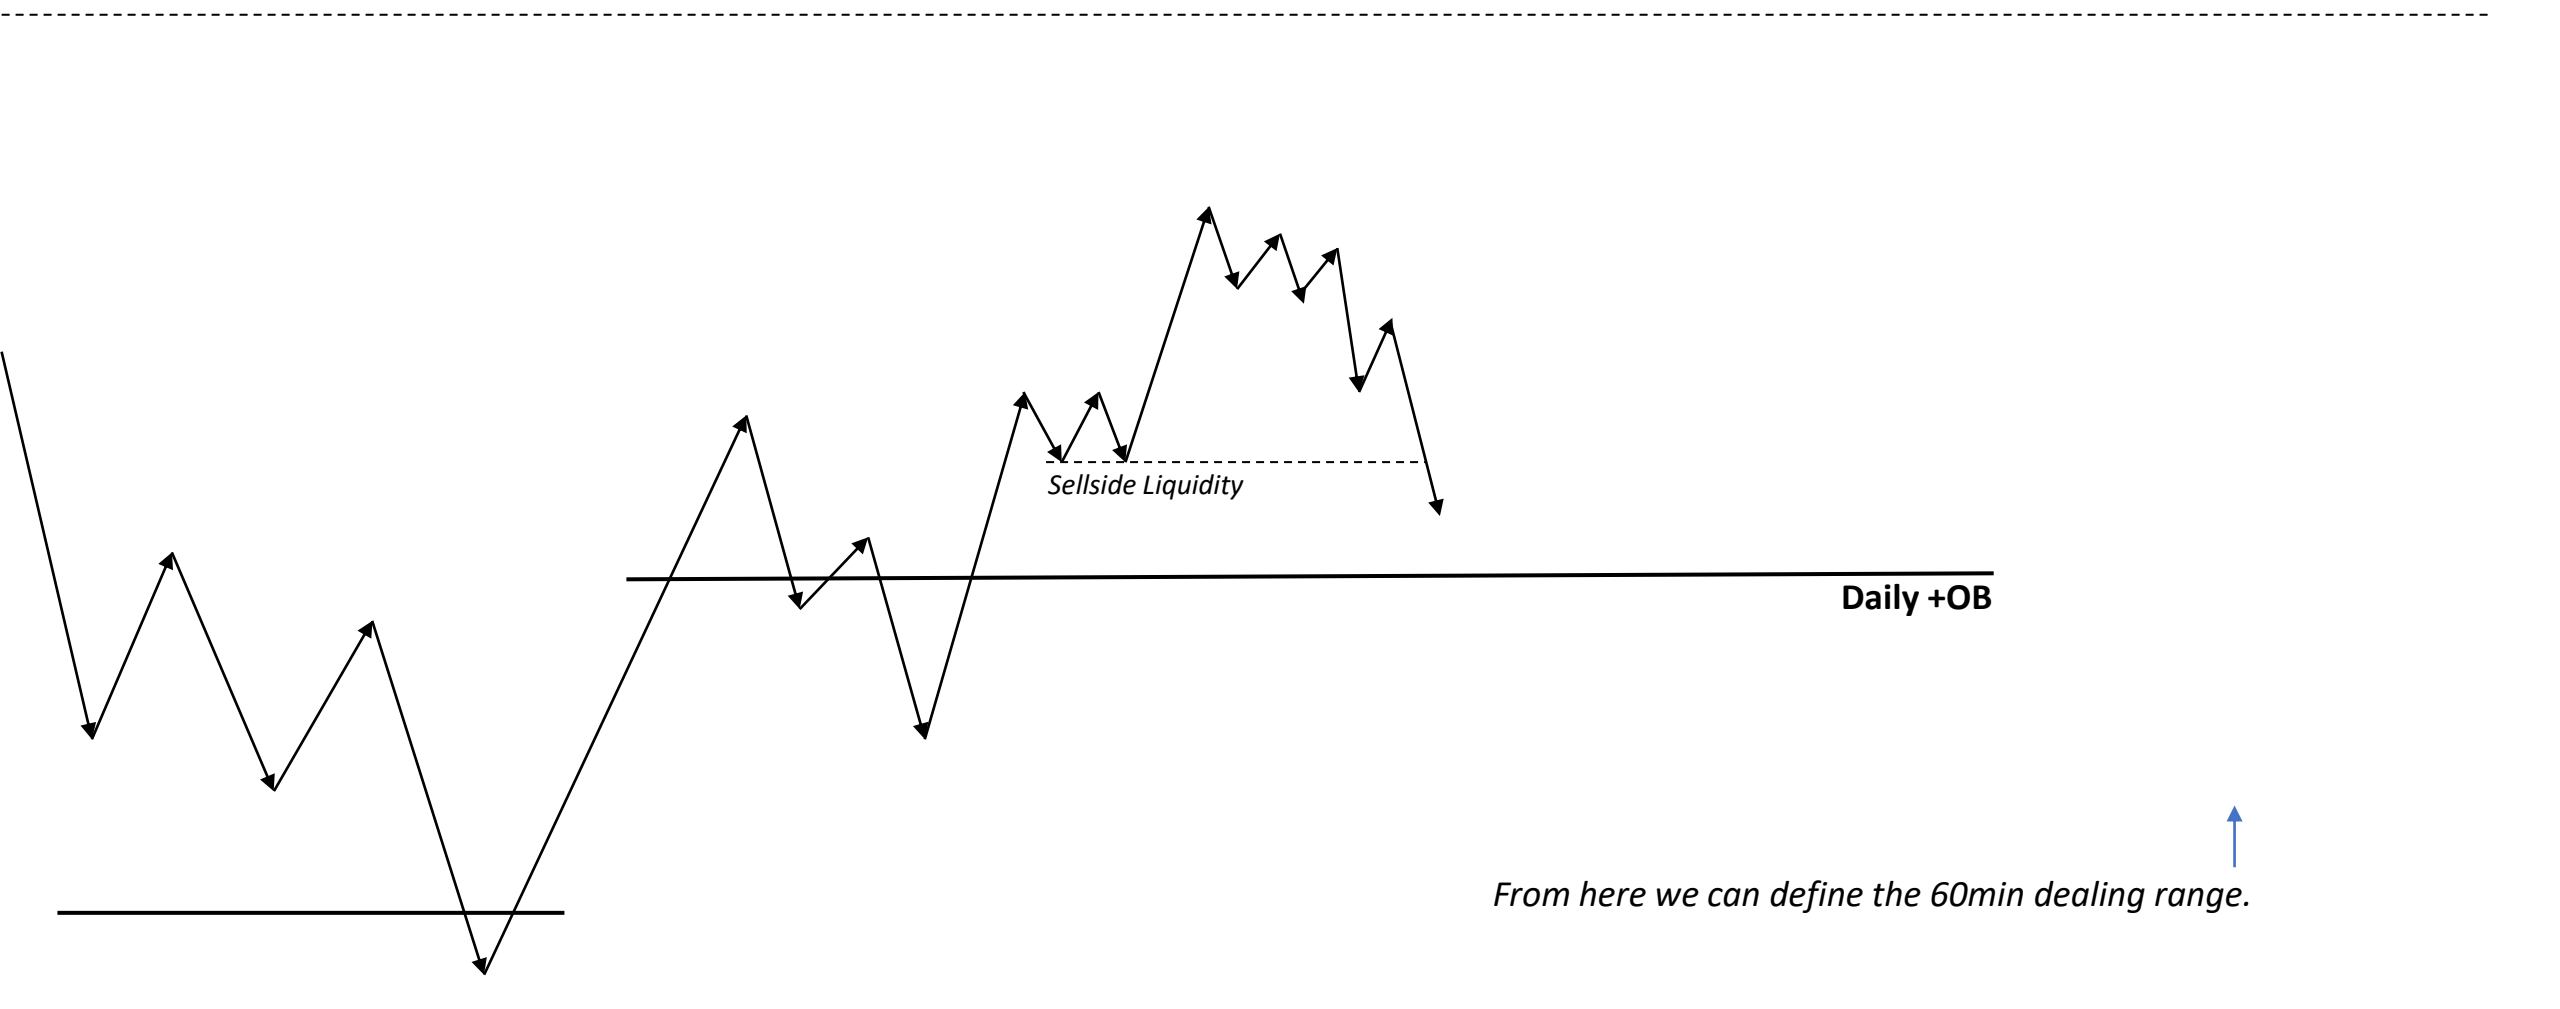

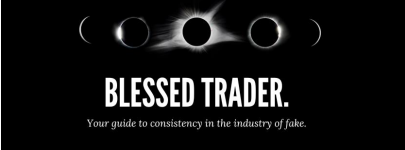

Daily TF Buyside Liquidity Pool

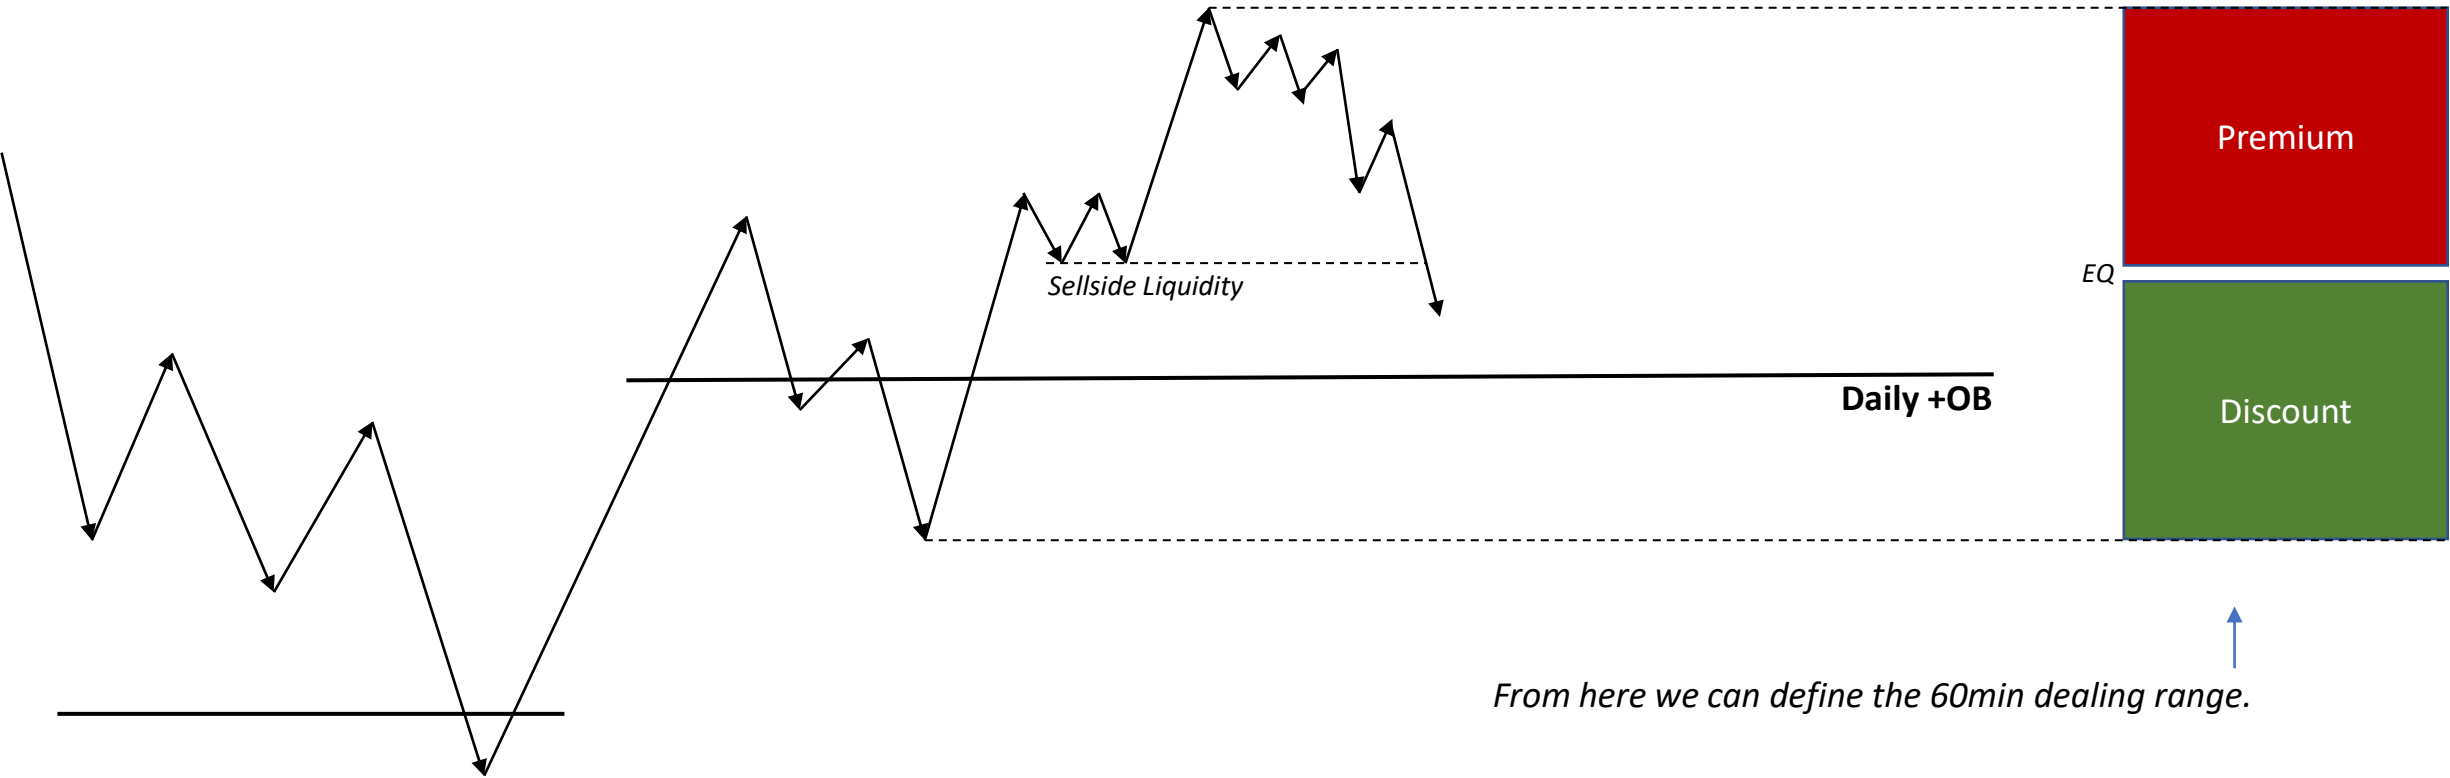

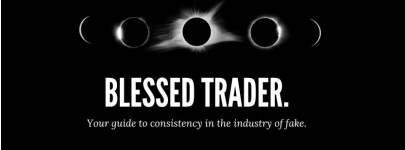

Daily TF Buyside Liquidity Pool

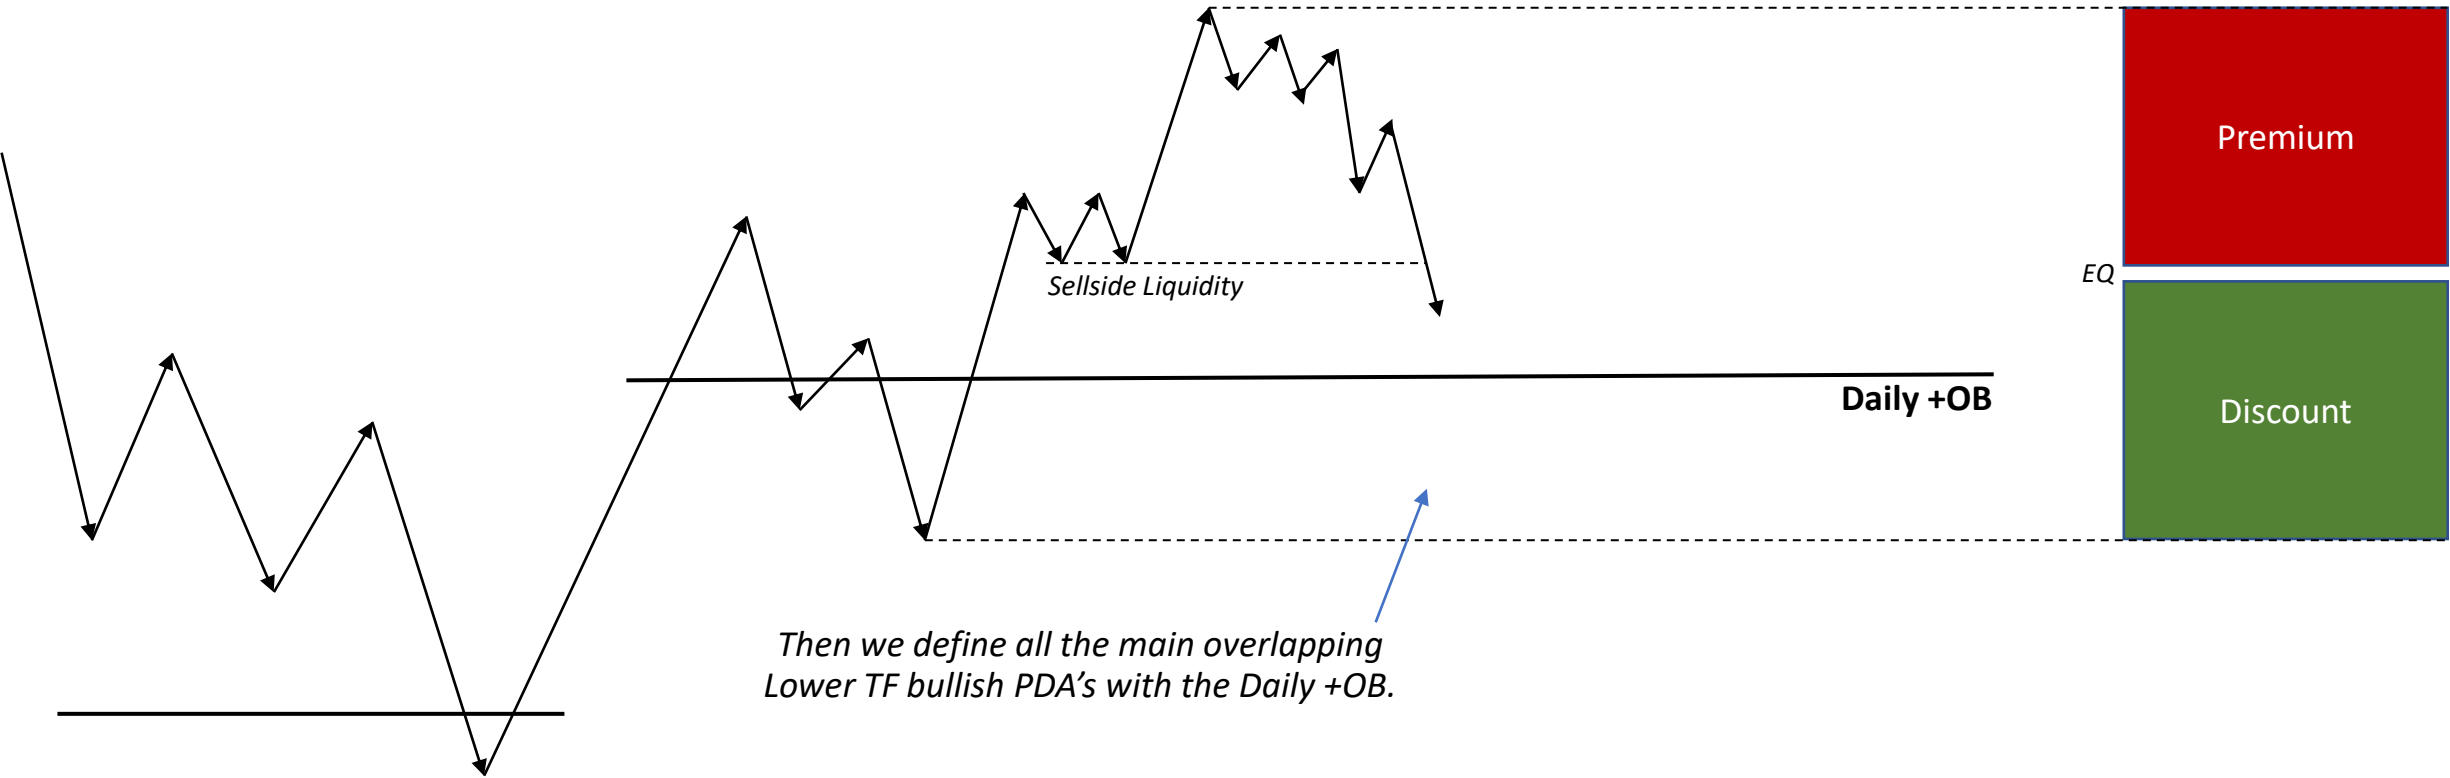

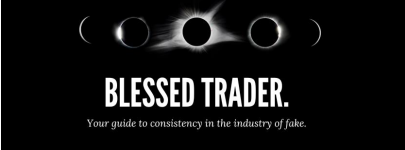

Daily TF Buyside Liquidity Pool

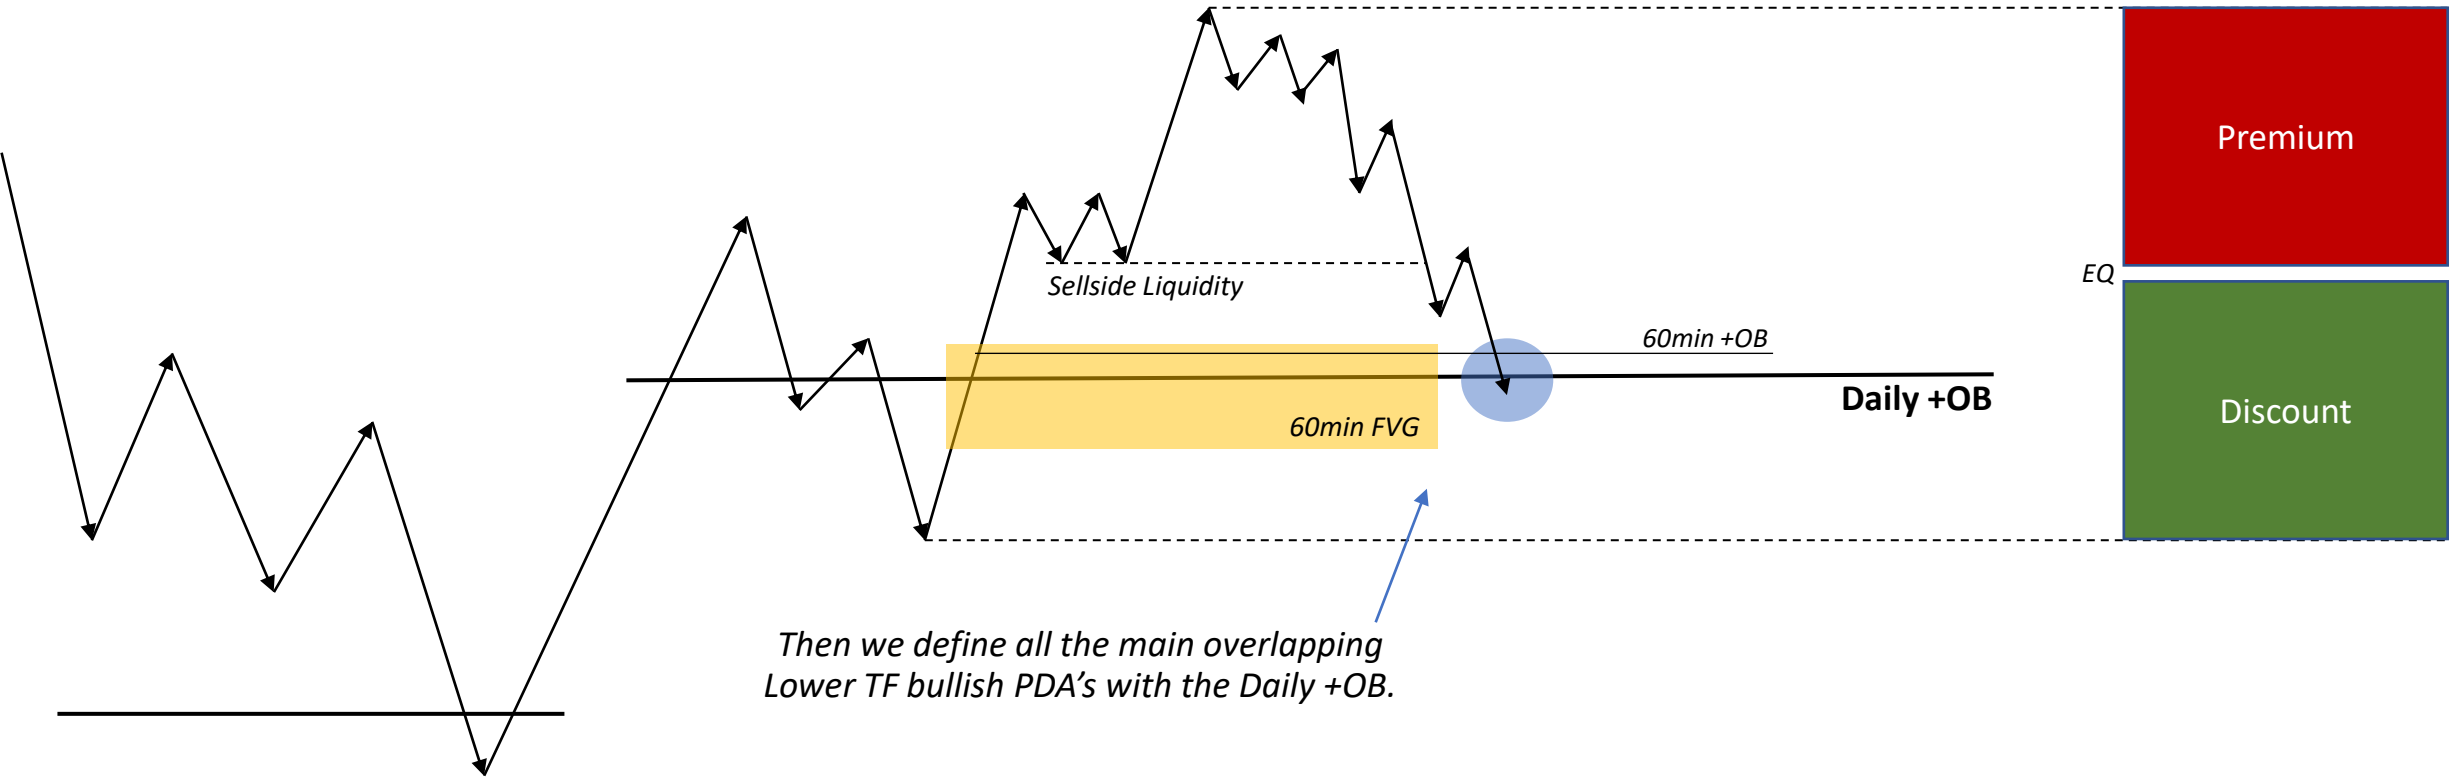

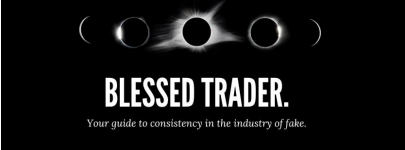

Daily TF Buyside Liquidity Pool

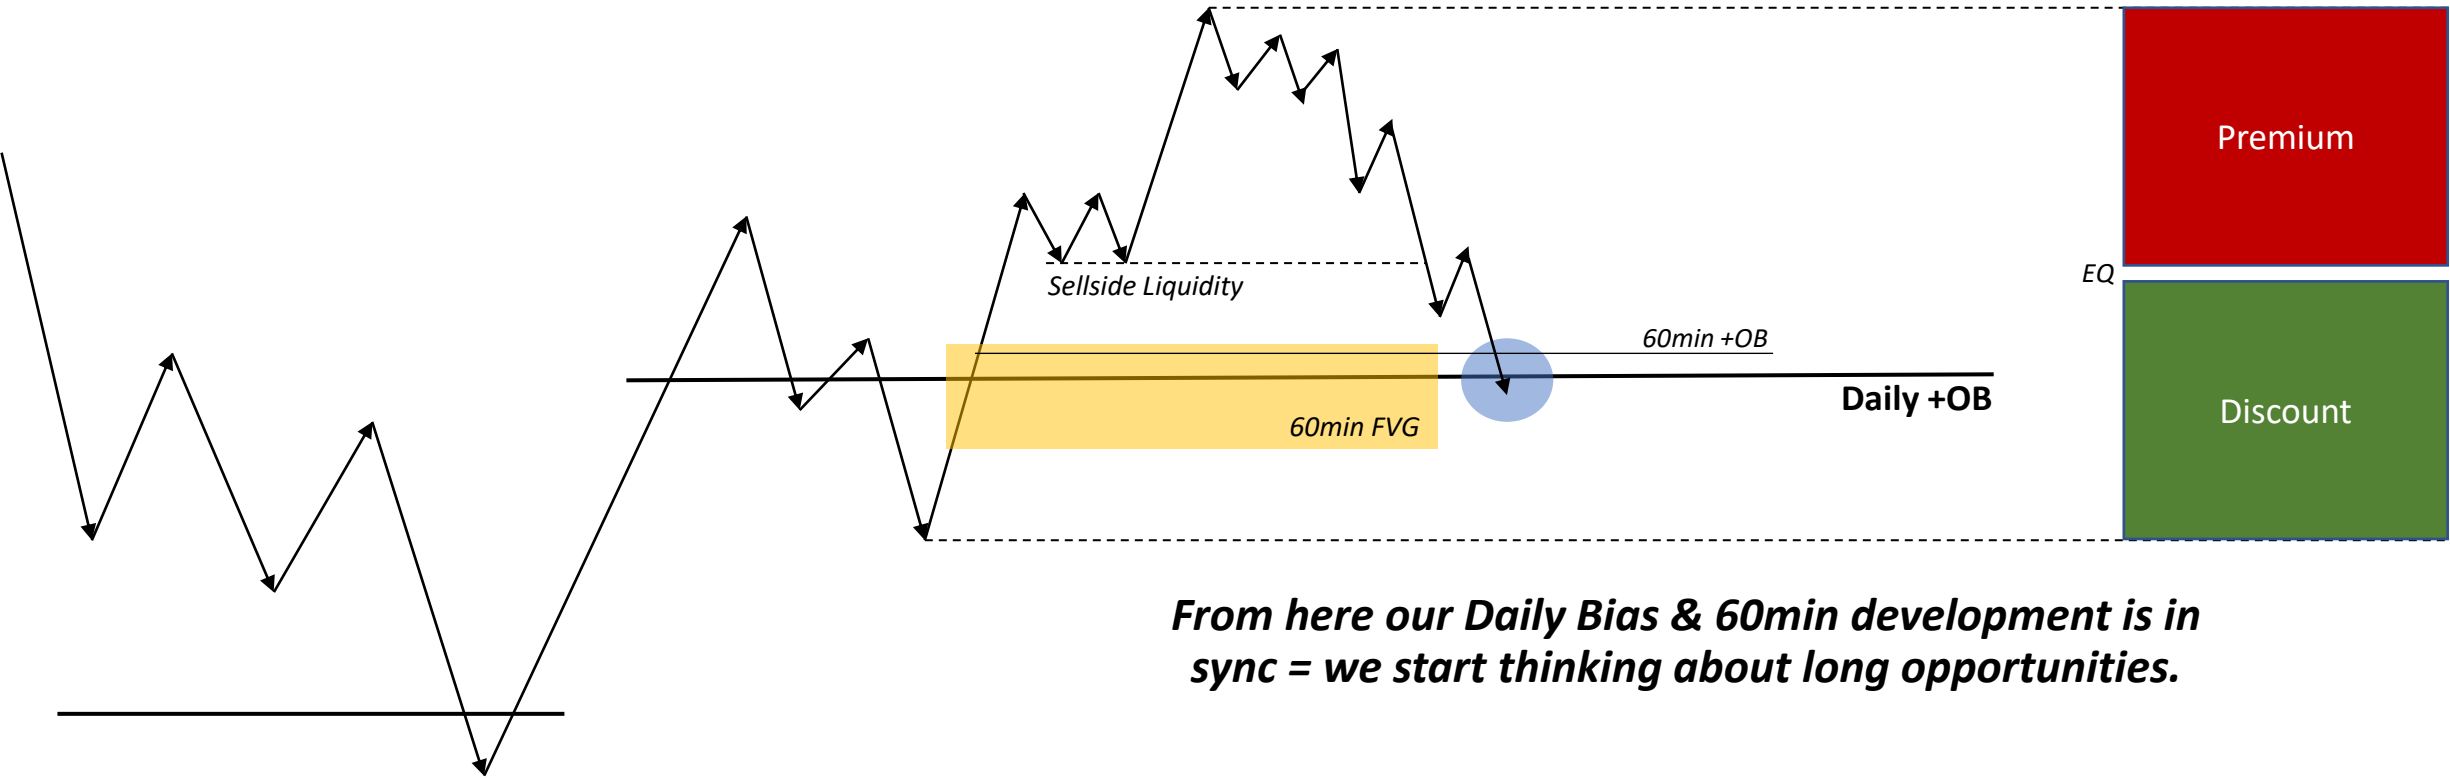

Daily TF Buyside Liquidity Pool

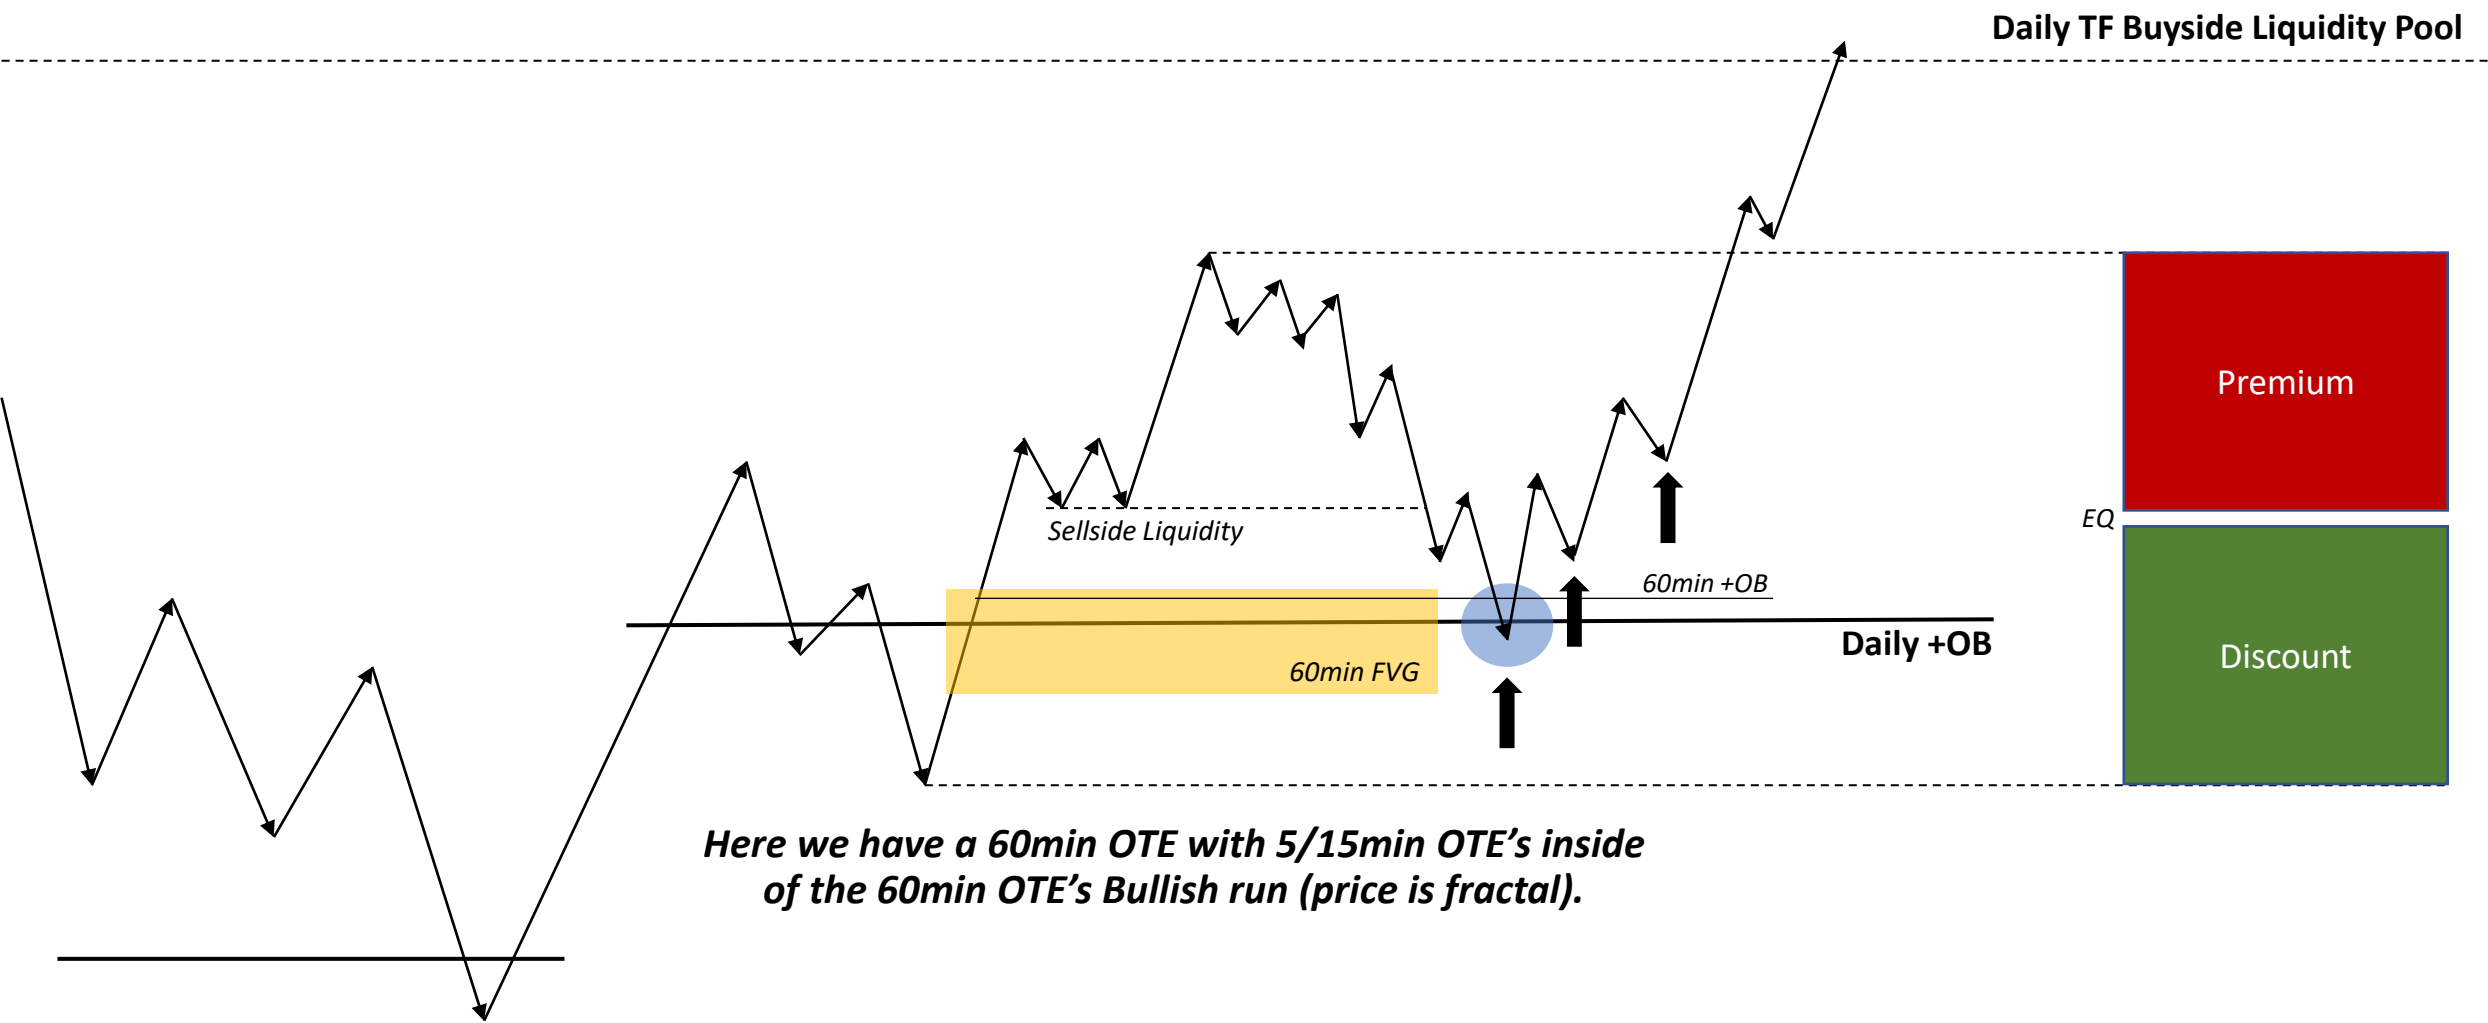

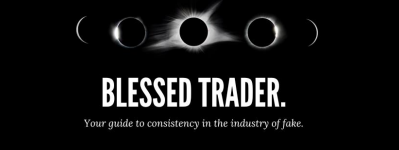

Daily TF Buyside Liquidity Pool

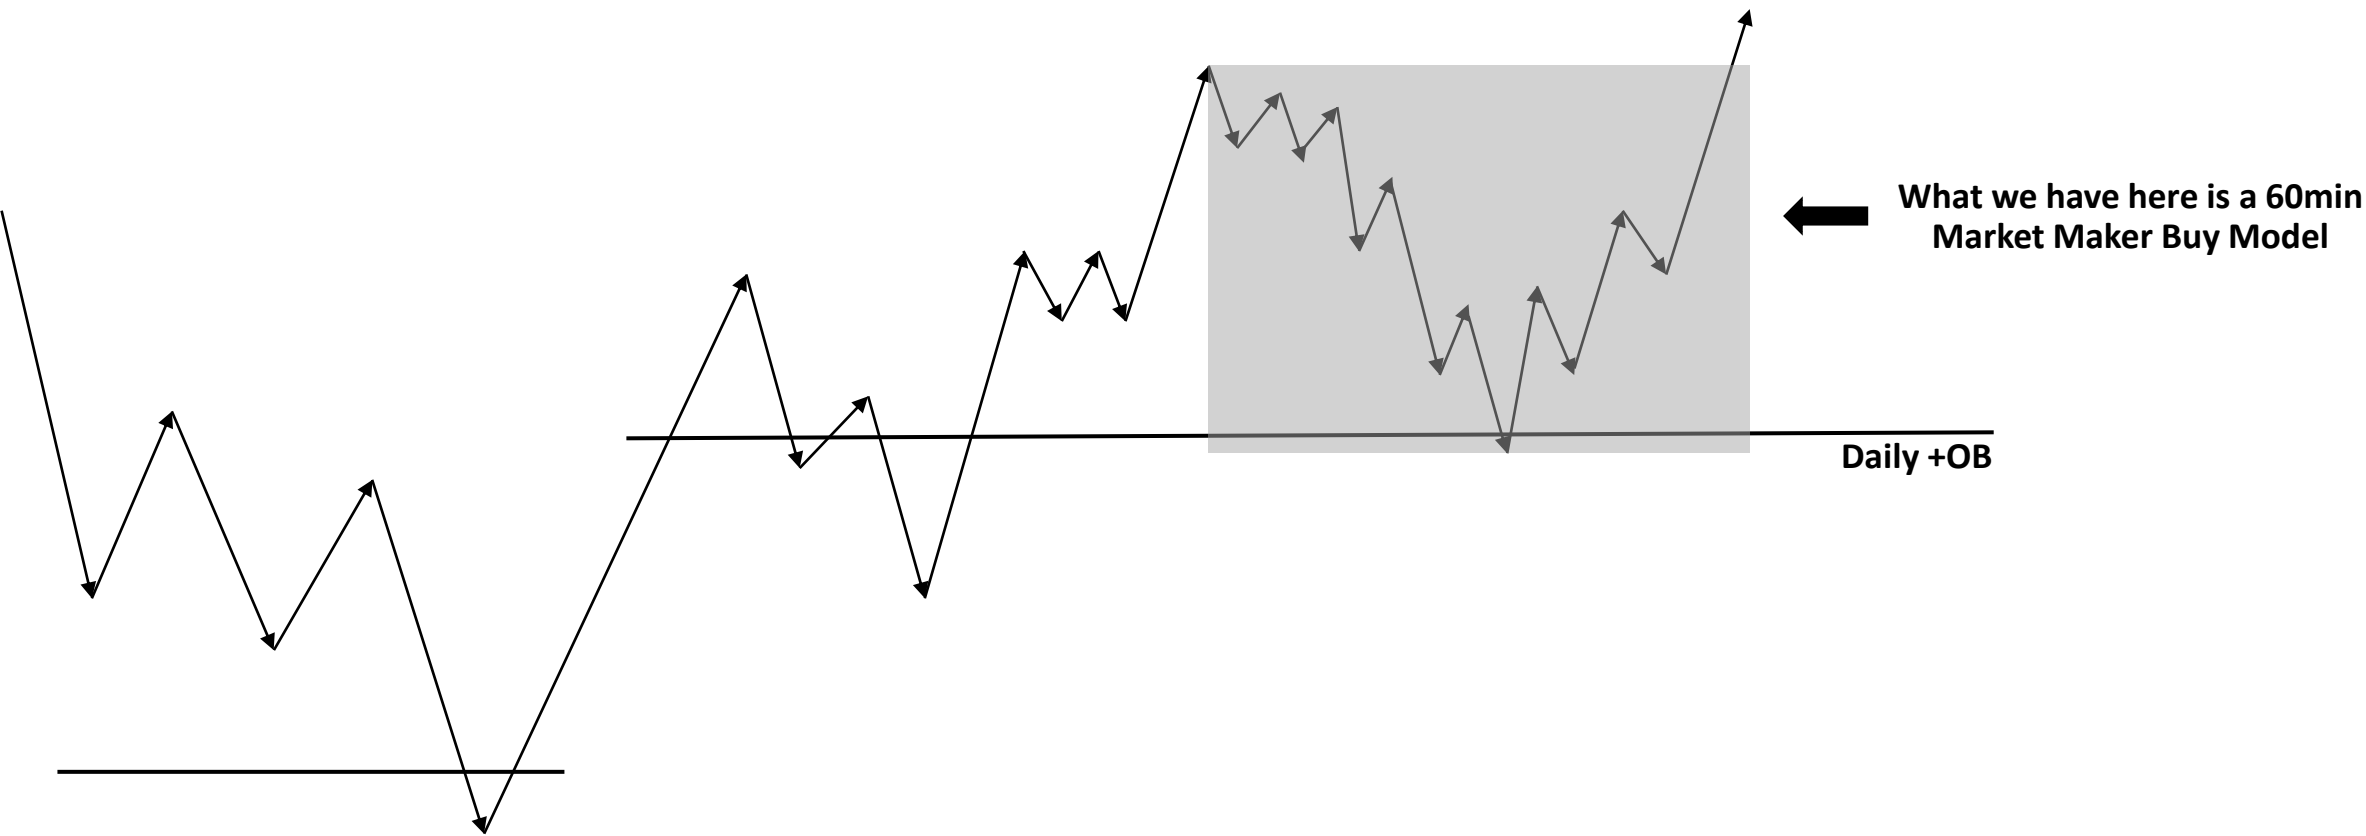

From here our Daily Bias & 60min development is in sync = we start thinking about long opportunities.

60min TIME-FRAME

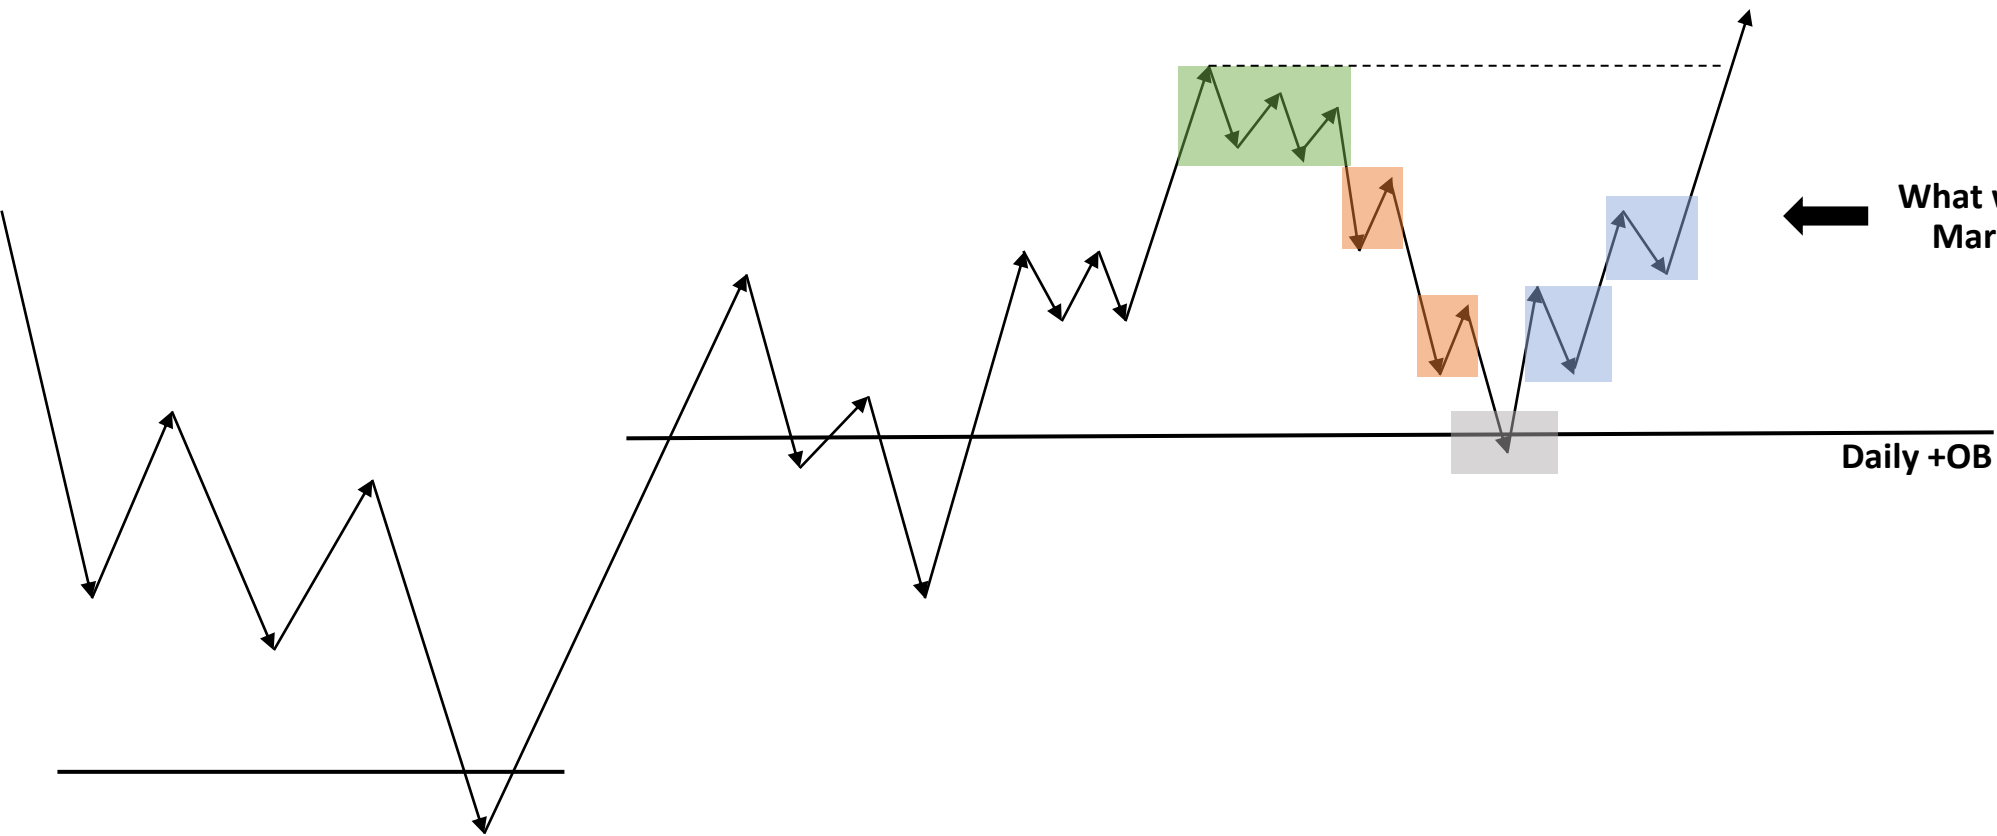

Daily TF Buyside Liquidity Pool

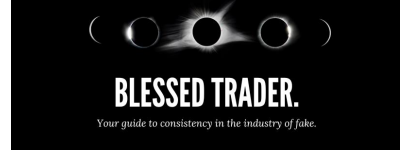

Daily TF Buyside Liquidity Pool

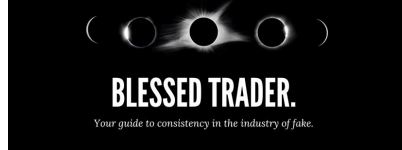

What we have here is a 60min
Market Maker Buy Model

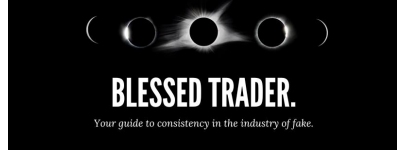

Don't worry, the previous example will make much more sense once we dig into the theory side of things.

MMXM is something that happens every day, on every time-frame. It can develop on a 1min TF, the same way it can develop on a 5min, 60min, 4 hour, Daily, Weekly and even the 30 sec TF, however, as always we focus only on the most important top-down structures the same way we mainly pay attention to the Daily -> 4hour/60min -> 5/15min overlapping Orderblocks not some random 111min & 14 second ones, so if something forms on all TF's it doesn't mean we need to be looking for it everywhere – no, that's the fastest way to lose your mind & your trading account.

That's why I wanted to dive into the visual examples of Top Down analysis right away to remind you of how just one variation of Top Down structure looks like (there could be few different TF variations).

Current Market Price

So, here imagine that we have a key level. What is a key level?

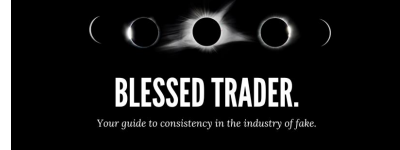

It could be many different things, many different PDA's of TF's that are 1 hour and higher like Monthly / Weekly / Daily / 4 hour / 1 hour, these are our main TF's where we look for "key" levels.

Large funds pay the most attention to Higher TF areas main one's being M/W/D but for us scalp traders & day traders 4 hour & 1 hour are still something that we include into our arsenal and focus on.

As in this lesson we're focusing on the MMXM's I want to mention that it doesn't mean that we can't look for trades that are approaching the key level, we can look for opportunities towards the key level (Bearish) and then later on from the key level (Bullish). There're enough variations to get involved in both moves.

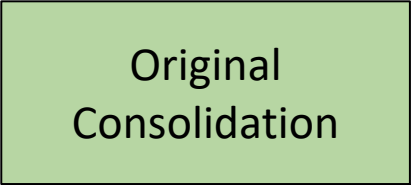

All trades against the main move towards the key level and away from the key level are short lived scalps (orange arrows) – don't be aggressive on these setups.

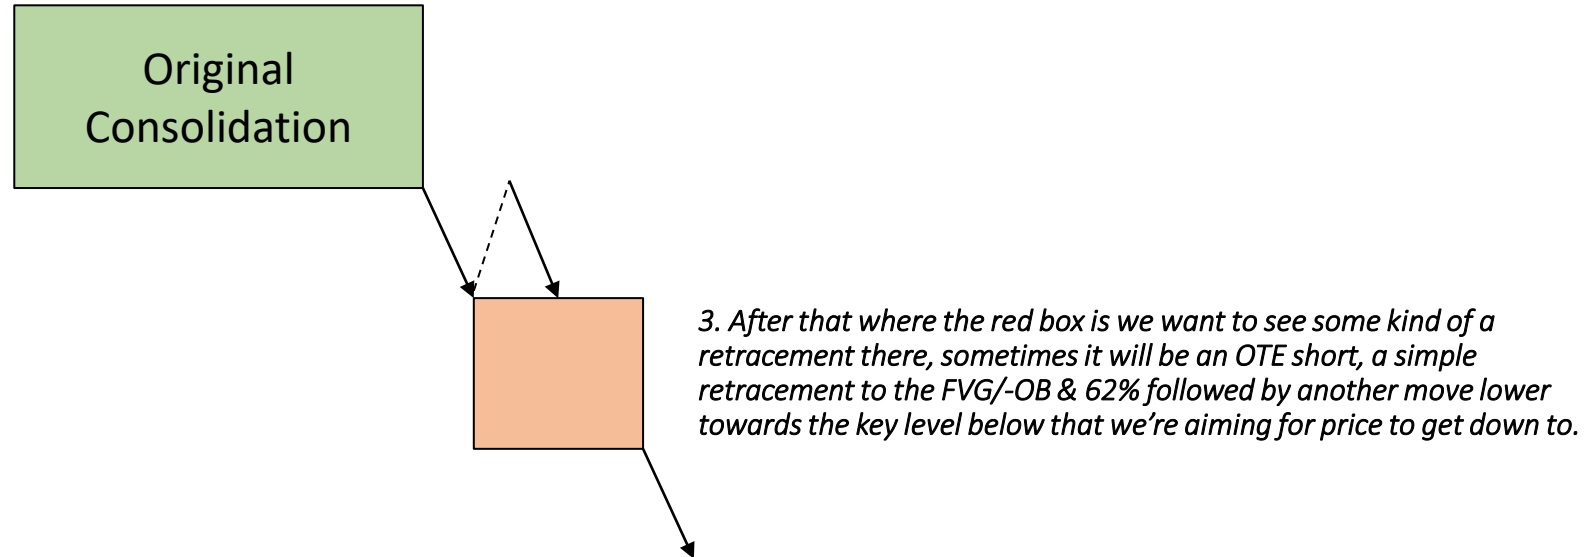

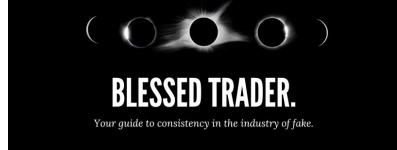

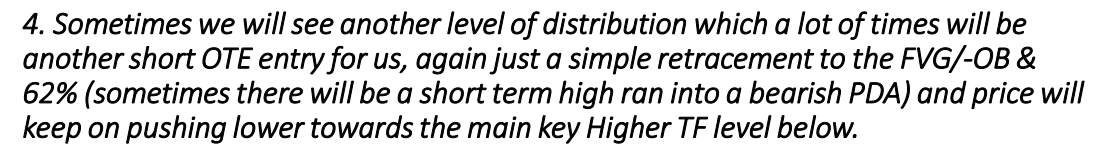

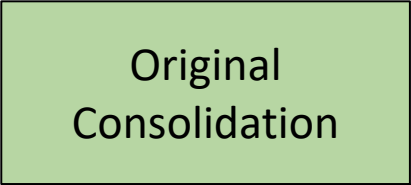

Original Consolidation

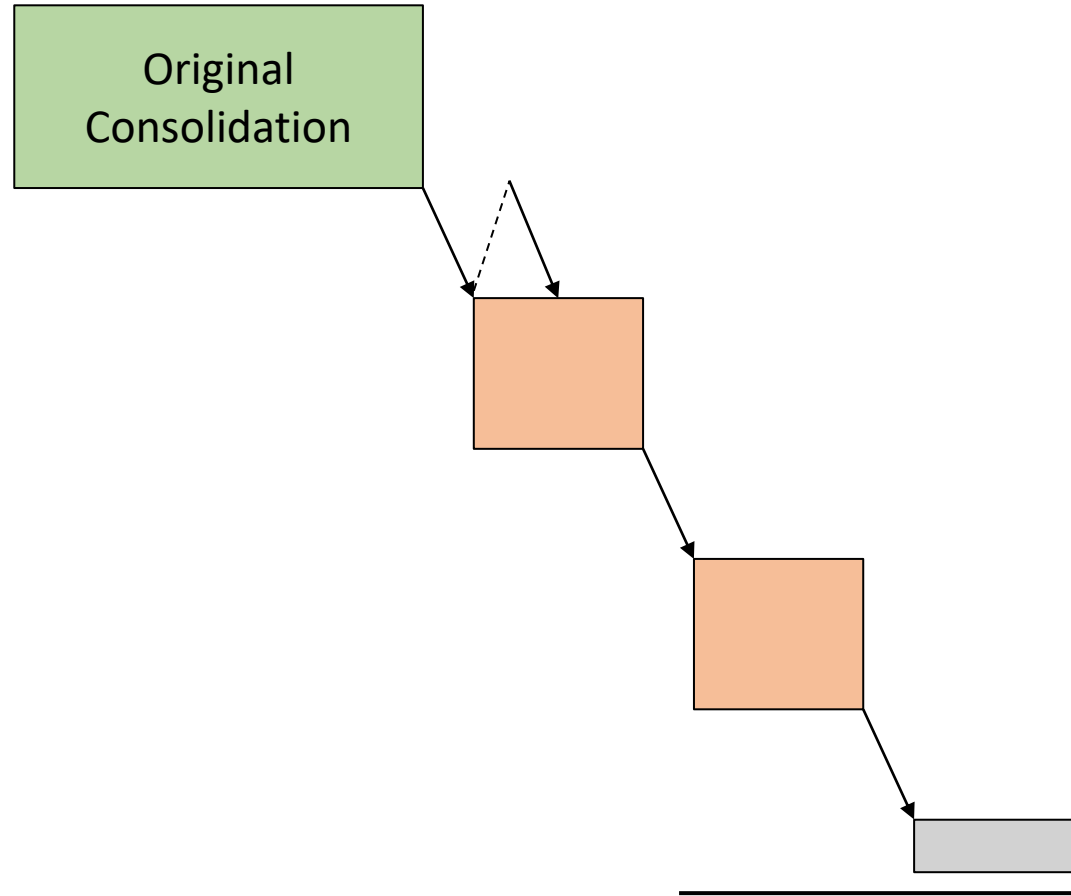

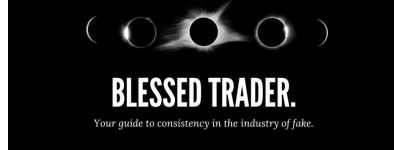

1. We want to firstly see some kind of a consolidation going on, some kind of a range forming (it doesn't have to be huge).

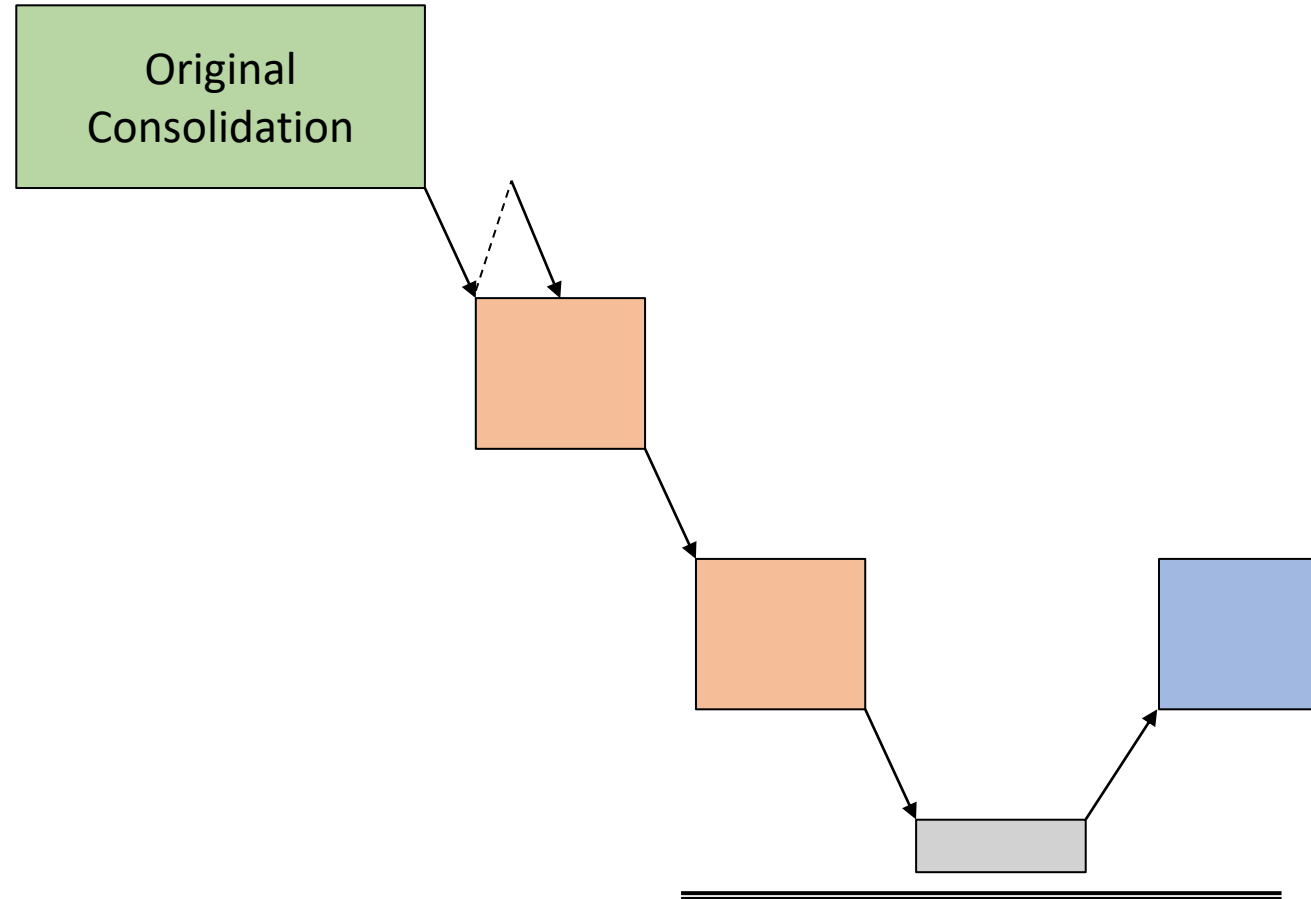

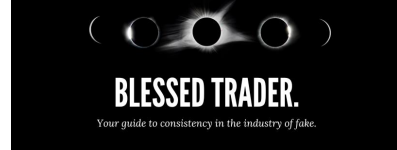

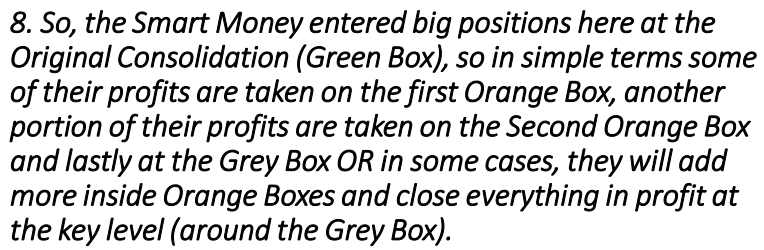

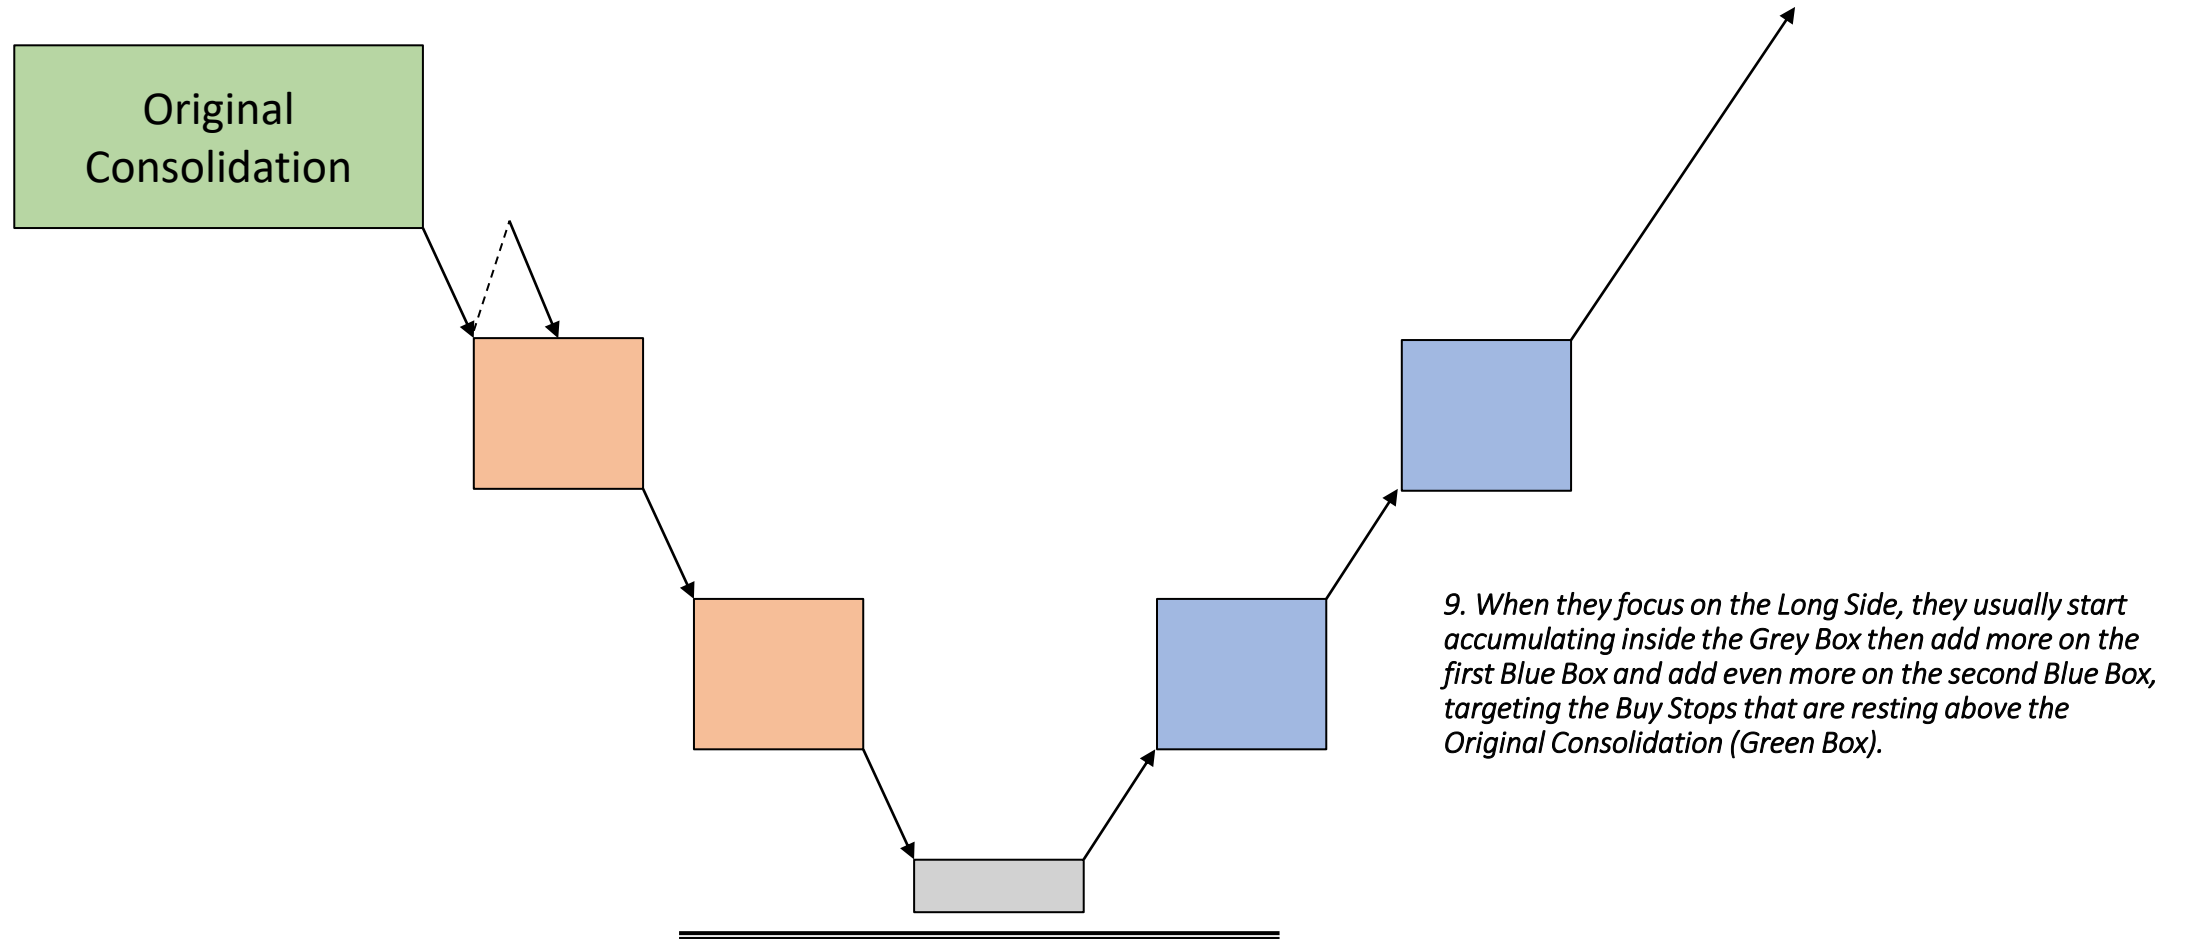

5. Eventually price reaches the key level and goes into the “Smart Money Reversal” Phase (Grey Box) remember the two potential patterns - it will either be a run on short term lows followed by a MSS higher or a Low followed by a Higher Low with a clear SMT Divergence.

!!! We don't want to see any Low Volume, flat lows there, we want a clear SM reversal pattern to be sure that price won't end up forming another level of Distribution to just keep pushing lower.

6. If we see price push Higher we assume that SM accumulated longs inside the Grey Box. We don't need to necessarily buy inside the Grey Box when the SM Reversal is happening as we will look for a safer Low Risk buy - OTE inside the Blue Box (sometimes inside the Blue Box) it will be a run on a Short-Term Low into Bullish PDA and then price will launch Higher).

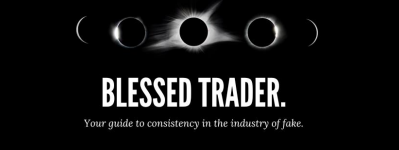

Original Consolidation

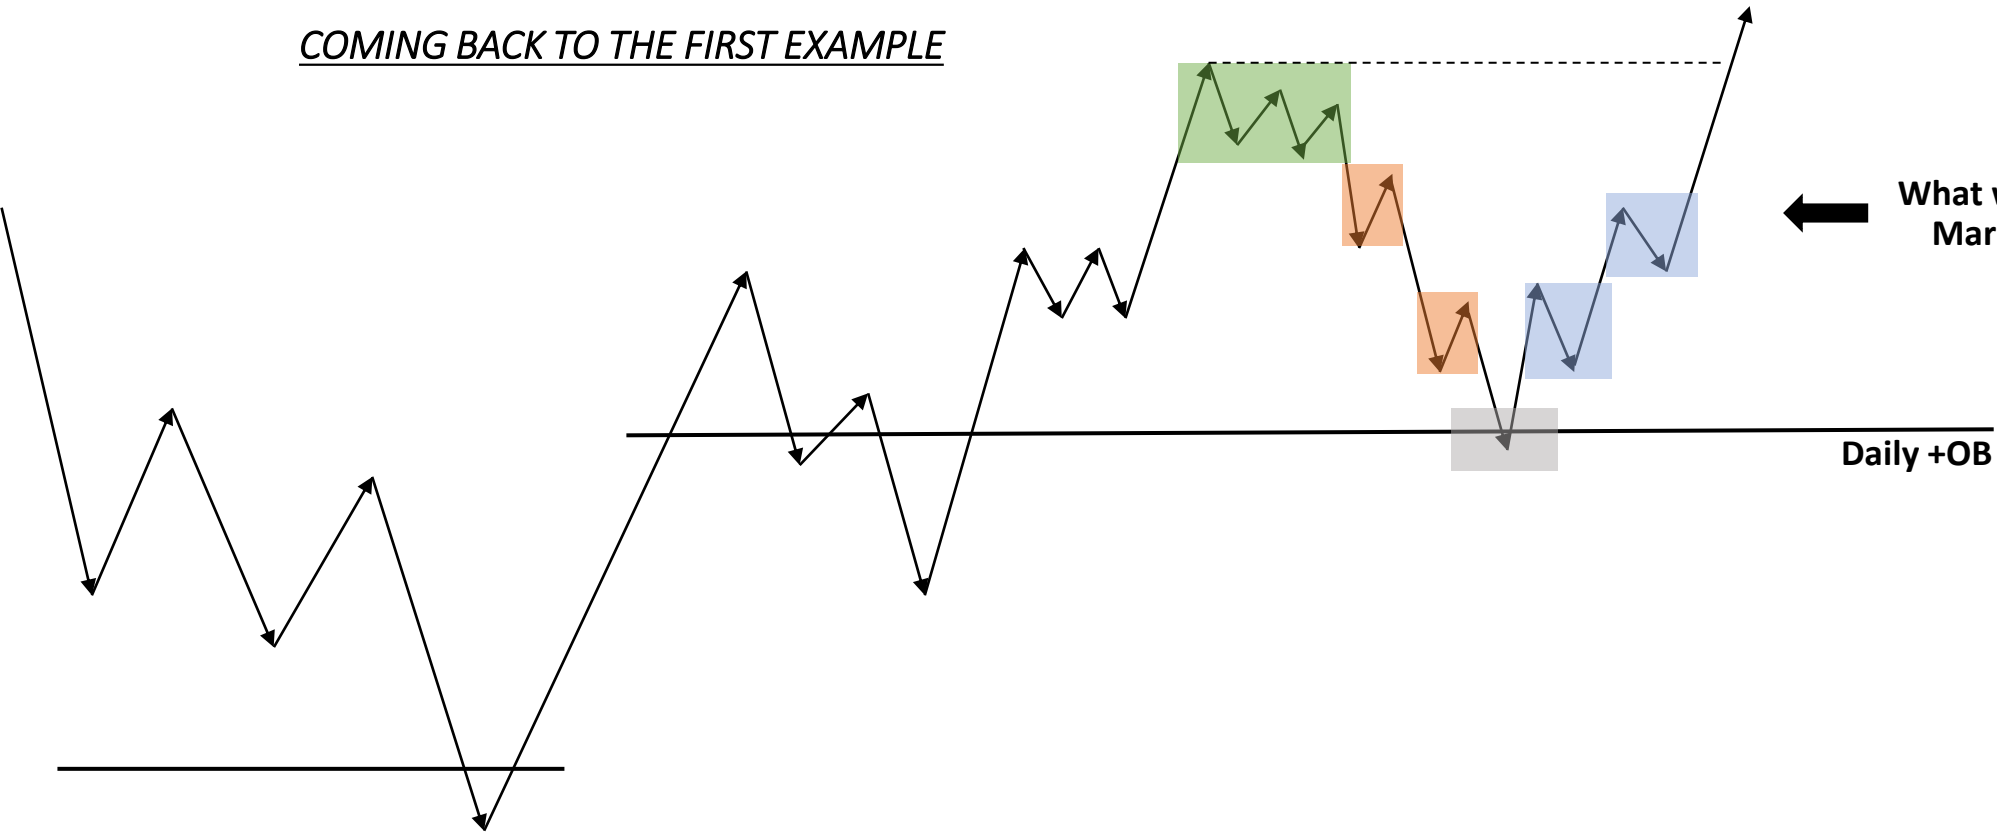

This is the Market Maker Buy Model (MMBM) which does look simple but it's a road map to many different formations that again as mentioned fall under the same umbrella that we will talk about more in our Daily Analysis as obviously we won't always have this textbook formation in the live markets and there will be discretion involved.

So, the IPDA Algorithm takes the price down and then gives a chance for traders (like us) who're aware of this model to jump in the train starting at the SM Reversal (Grey Box).

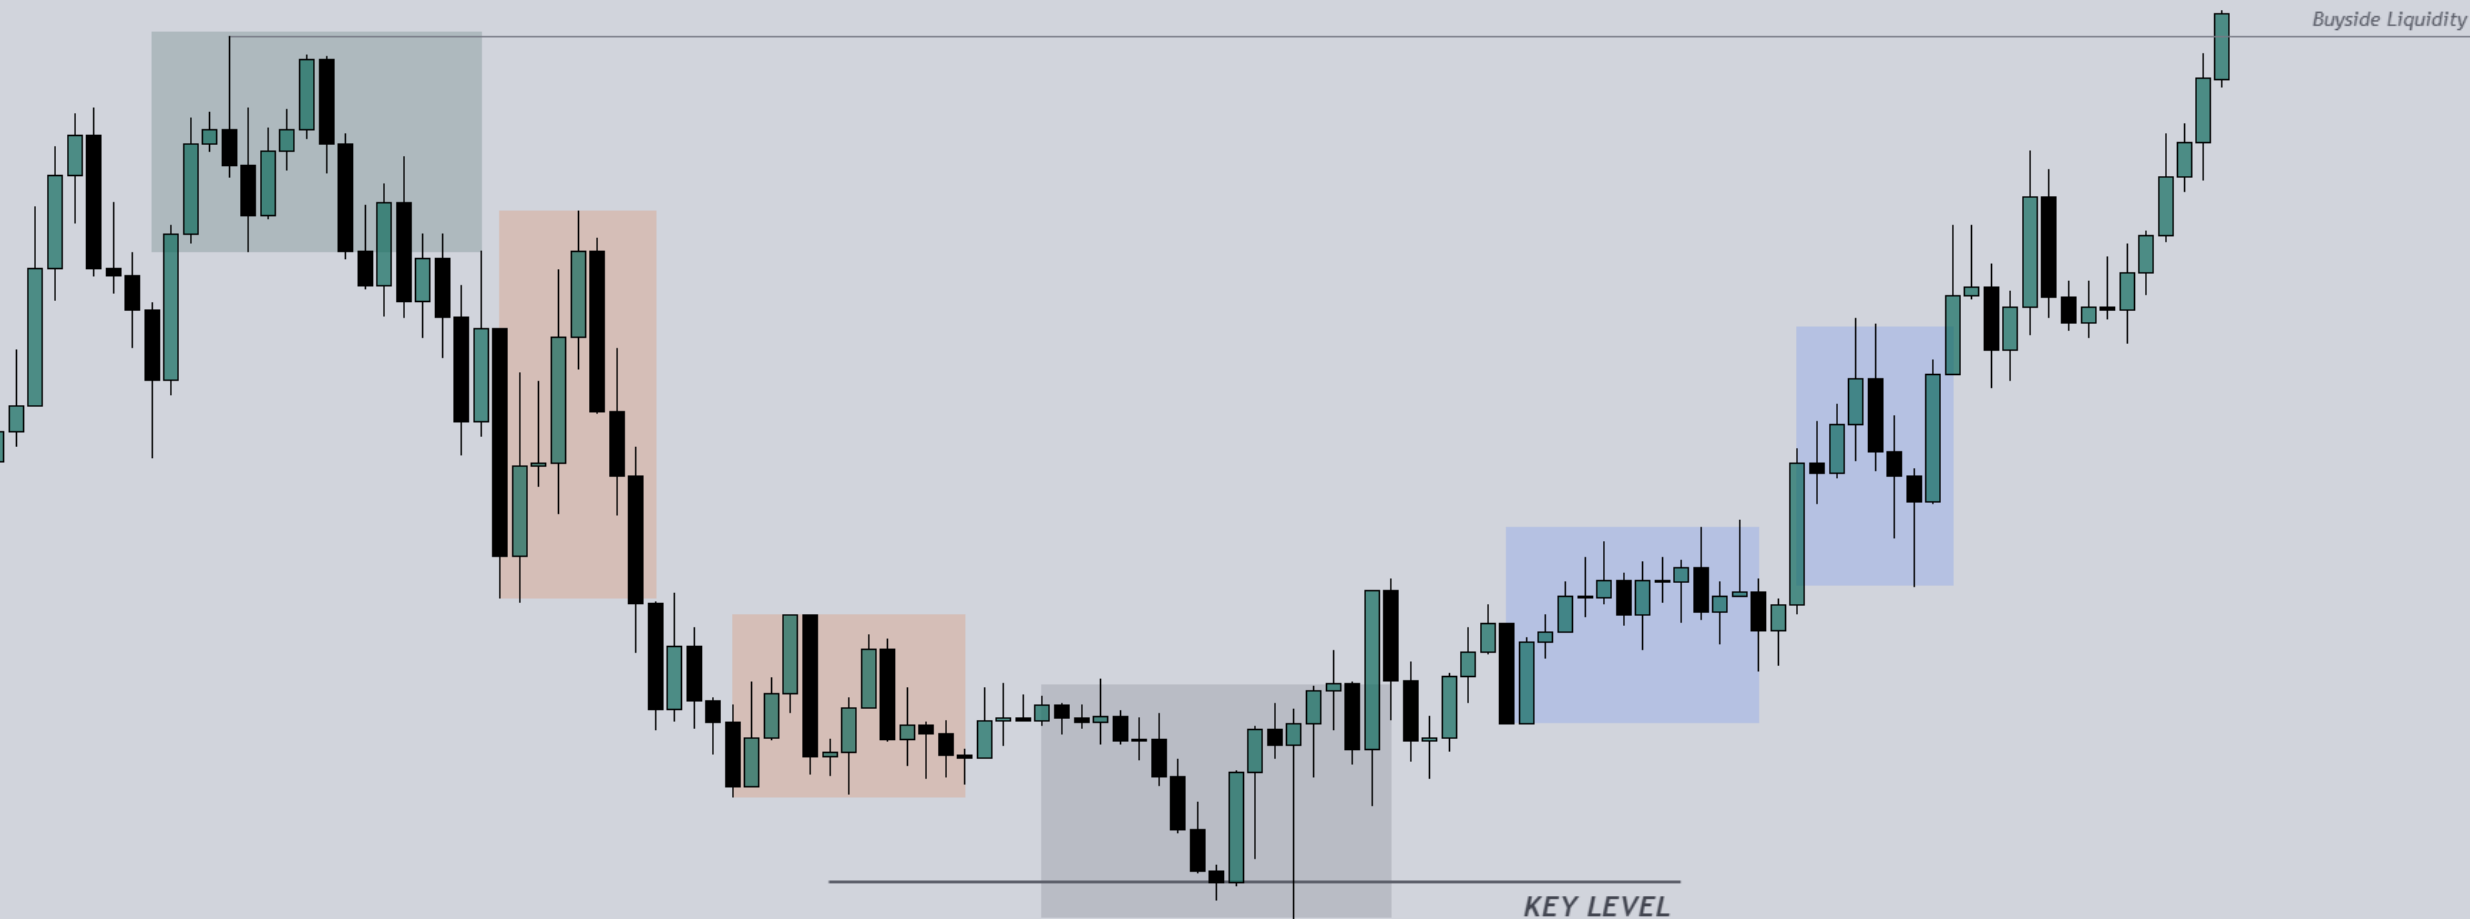

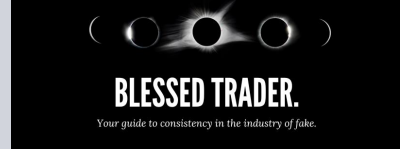

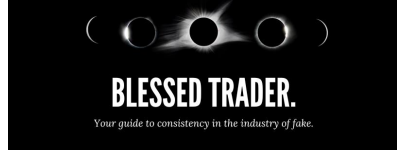

Daily TF Buyside Liquidity Pool

COMING BACK TO THE FIRST EXAMPLE

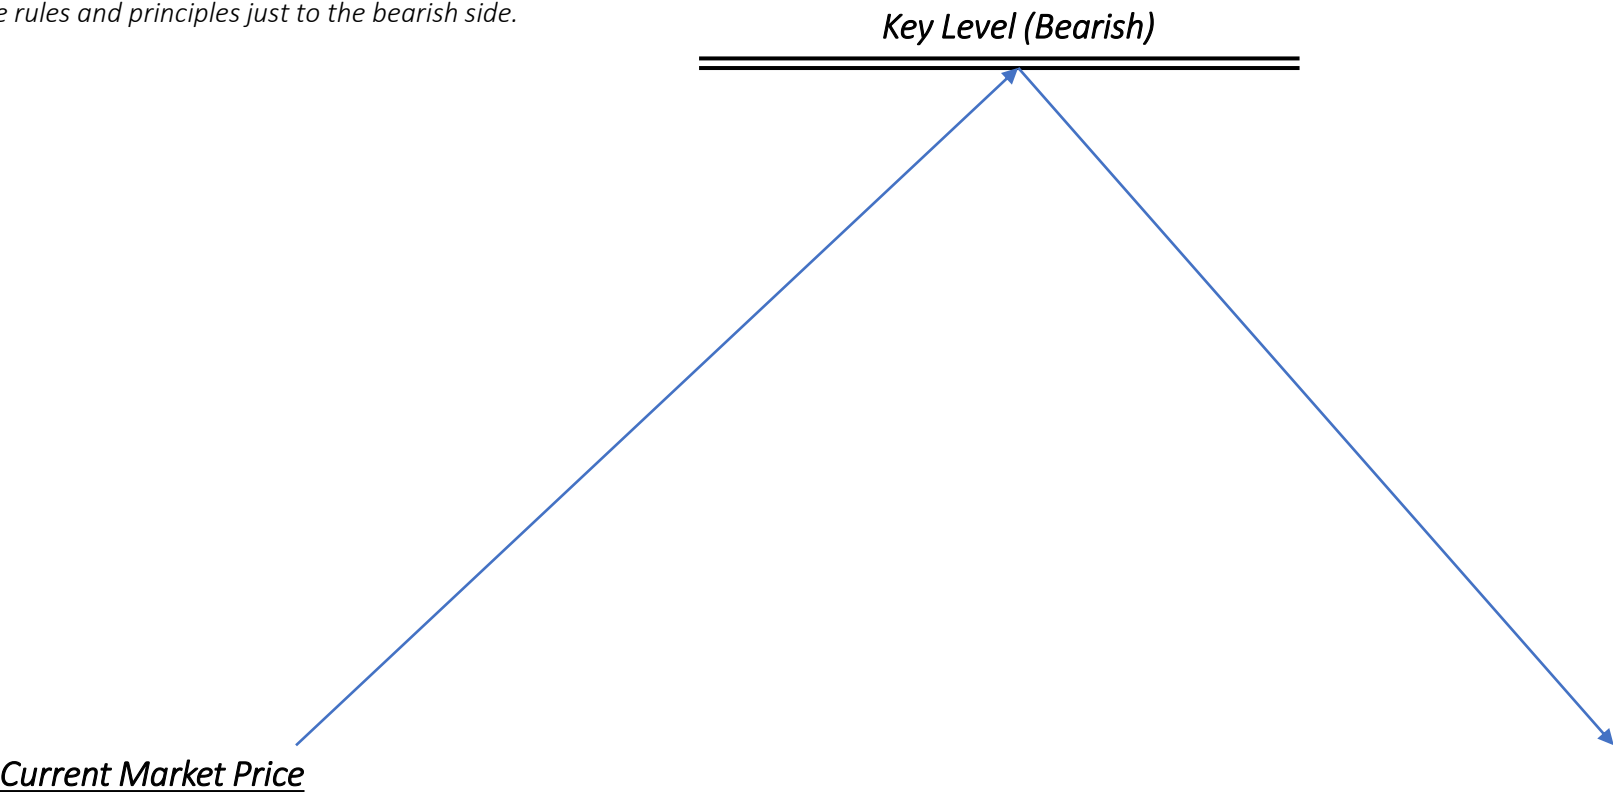

What we have here is a 60min
Market Maker Buy Model

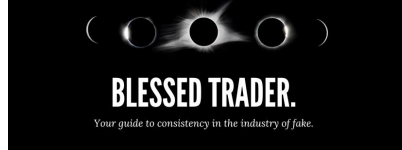

Market Maker Sell Model (MMSM)

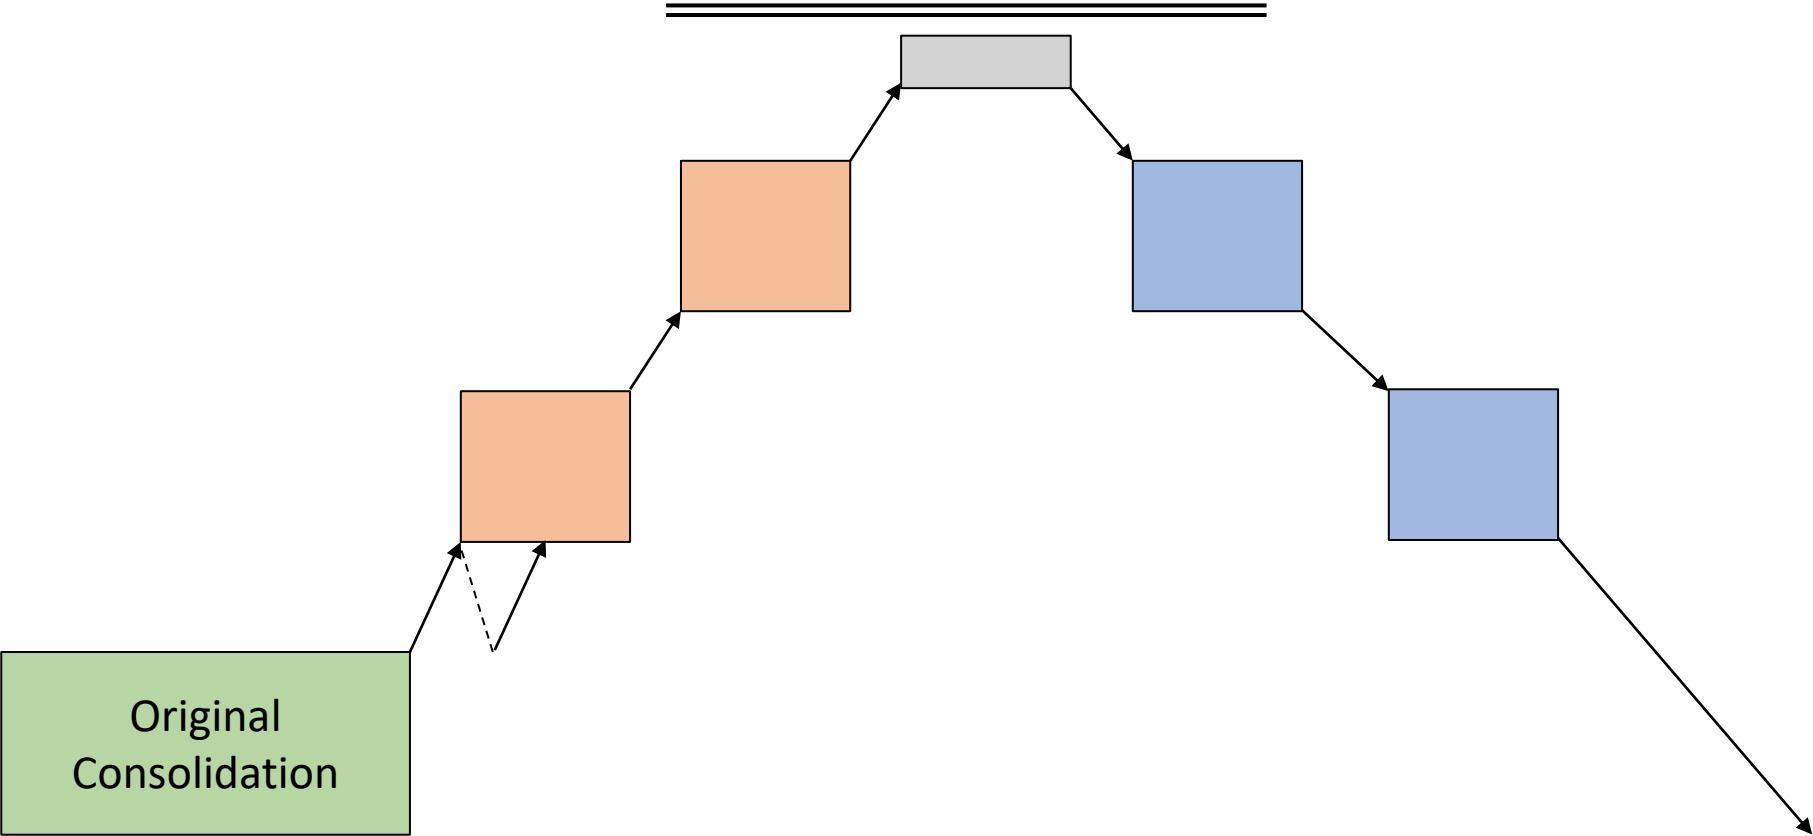

All the same rules and principles just to the bearish side.

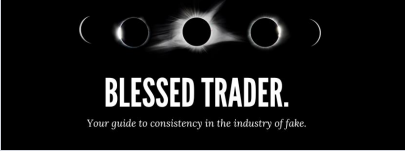

Market Maker Sell Model (MMSM)

All the same rules and principles just to the bearish side.
